

Setup Guide

stream pet

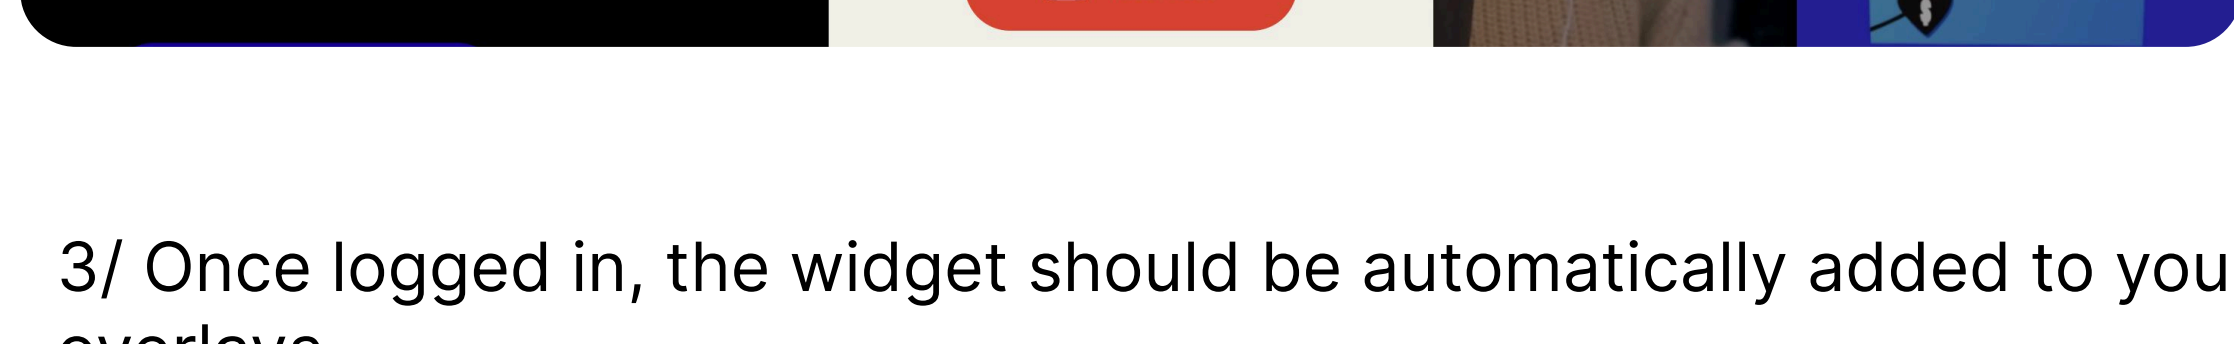

Step 1:

Import the files into StreamElements.

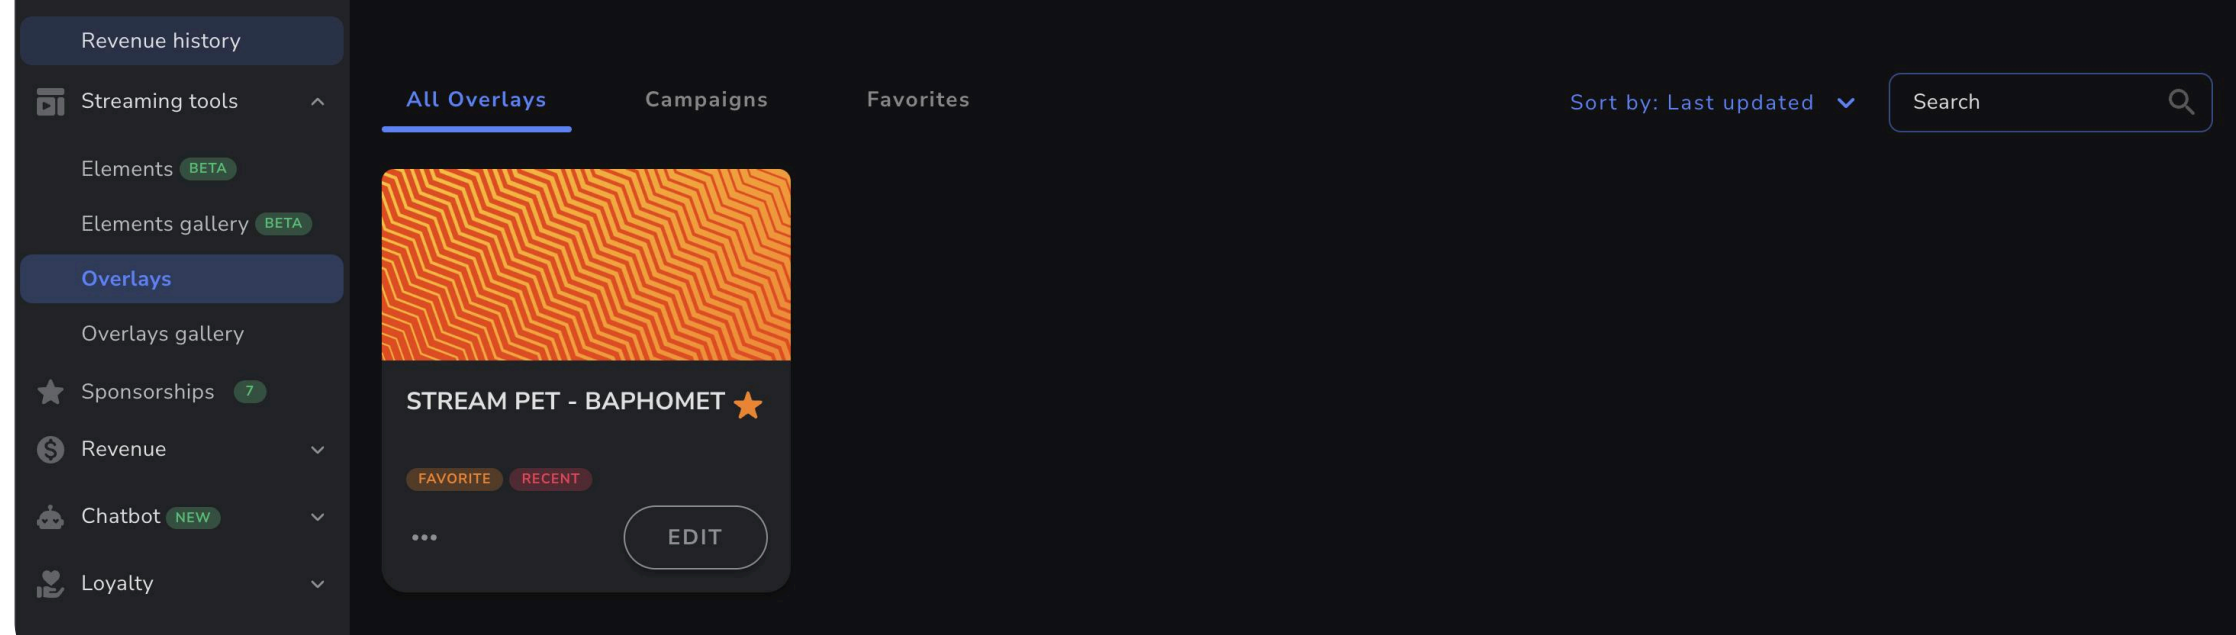

1/ From your computer, open the file **"Part 2 - Widget Files"** and double-click on the file "Stream Pet".url

2/ A StreamElements page will open in your web browser. Log in with your **Twitch account**.

3/ Once logged in, the widget should be automatically added to your overlays.

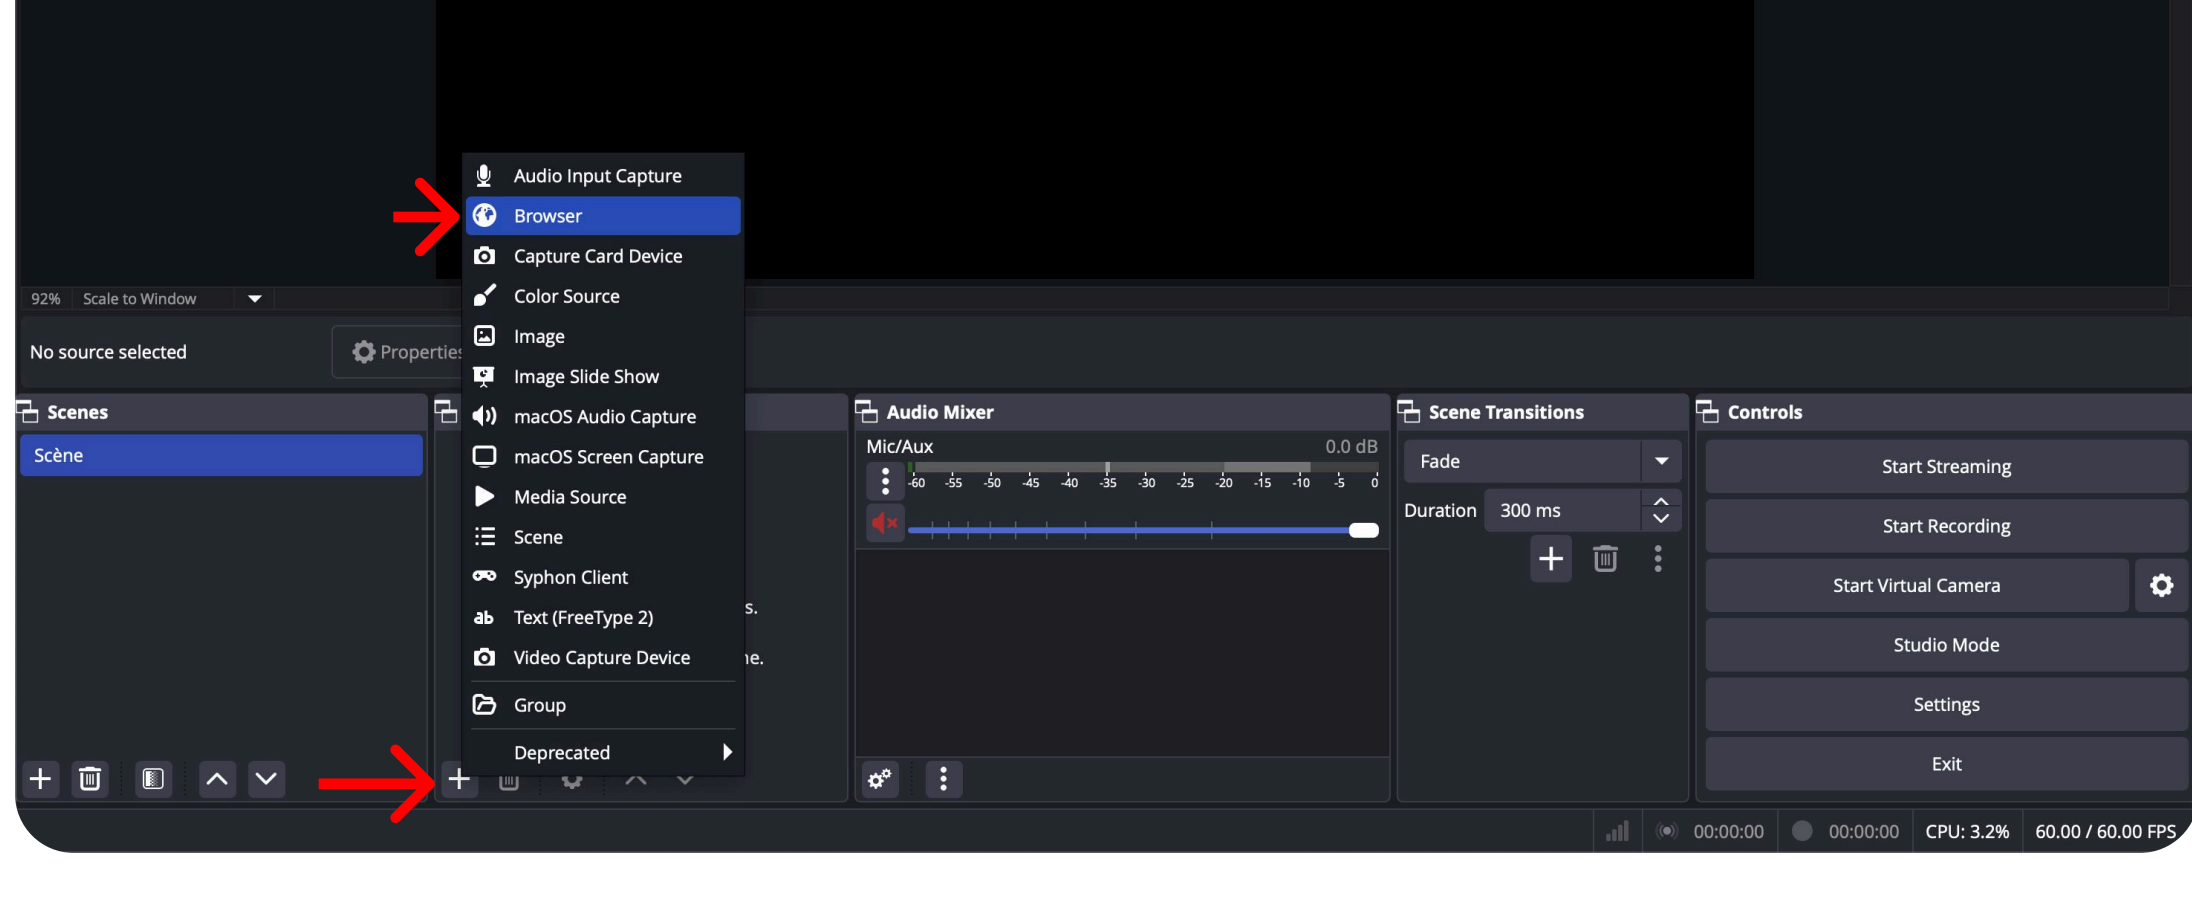

4/ Now click on the "..." and copy the URL

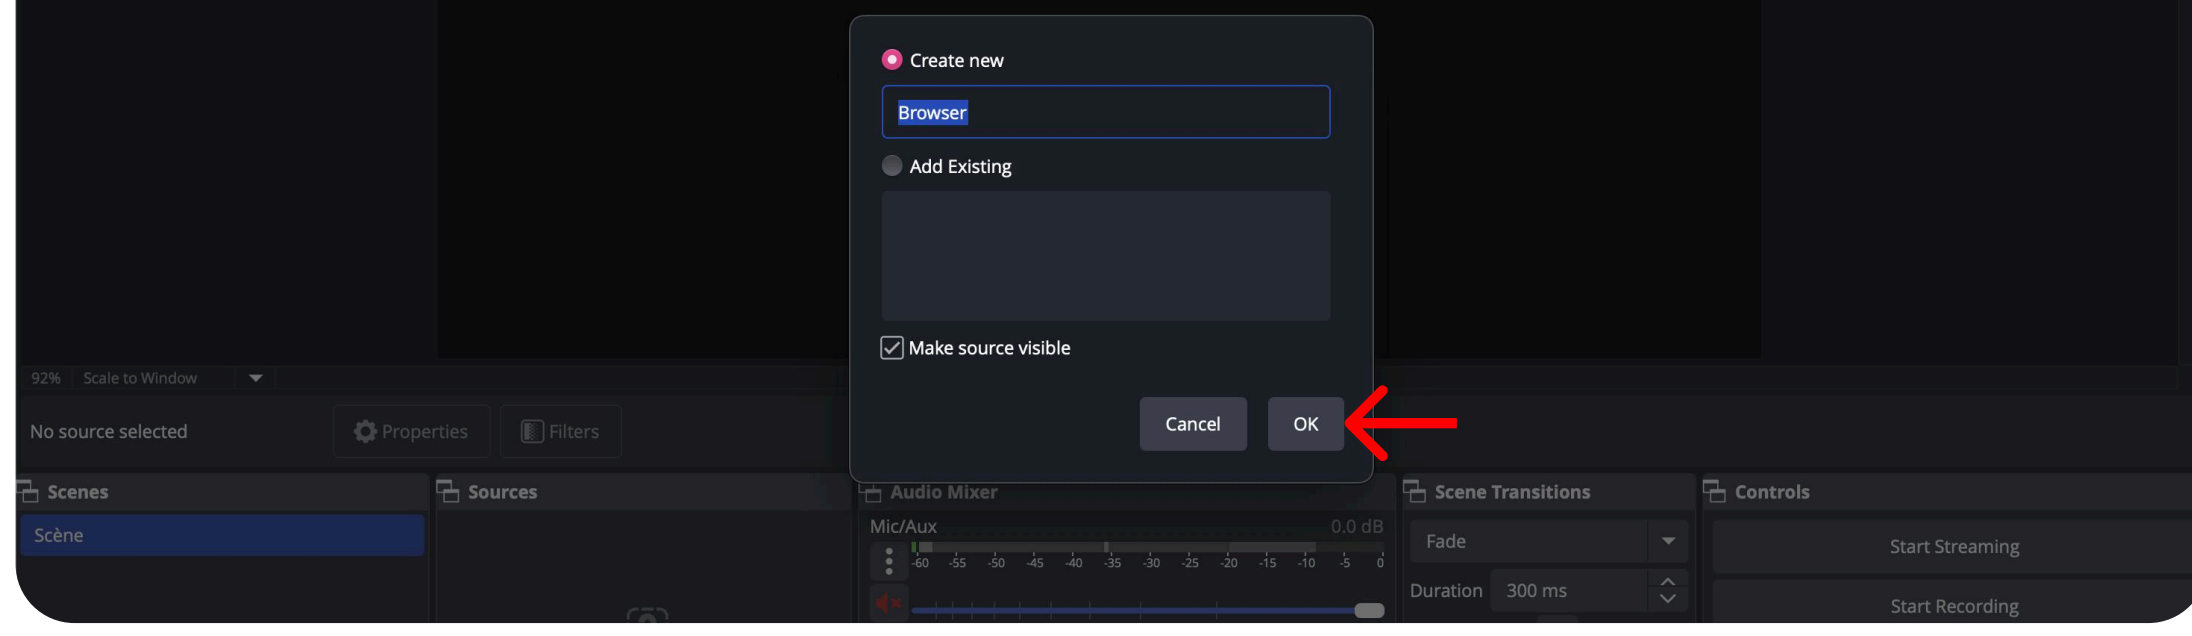

Step 2:

Import the link into OBS or Streamlabs

1/ Open OBS or Streamlabs on your computer and add a new source: "Browser".

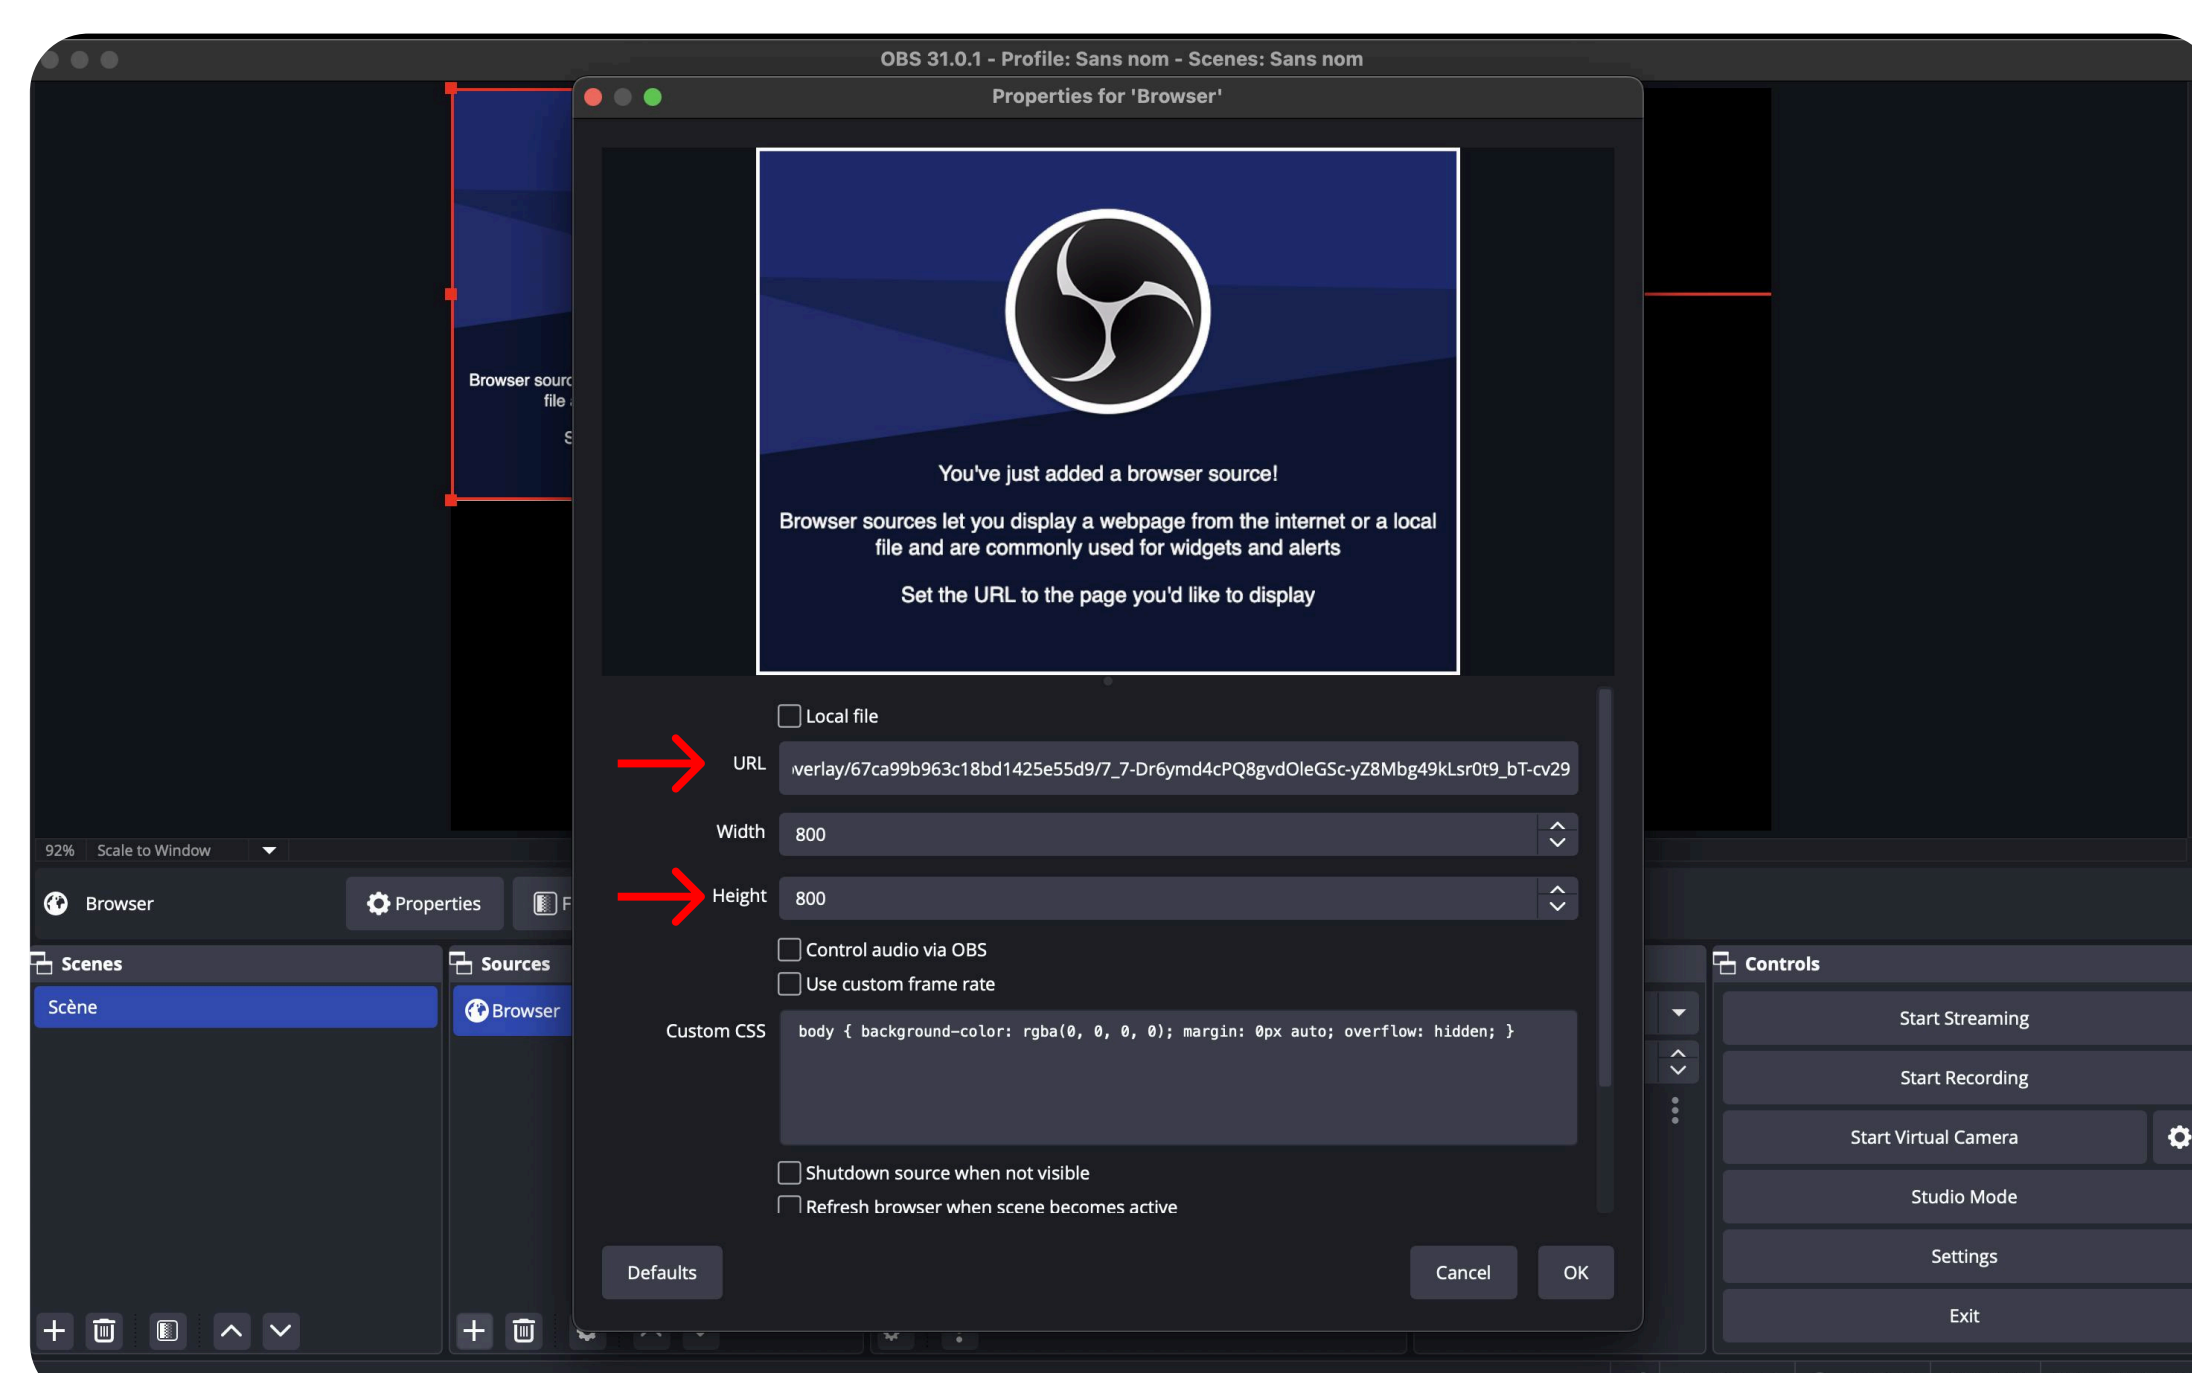

2/ Give your source a name and click "Ok."

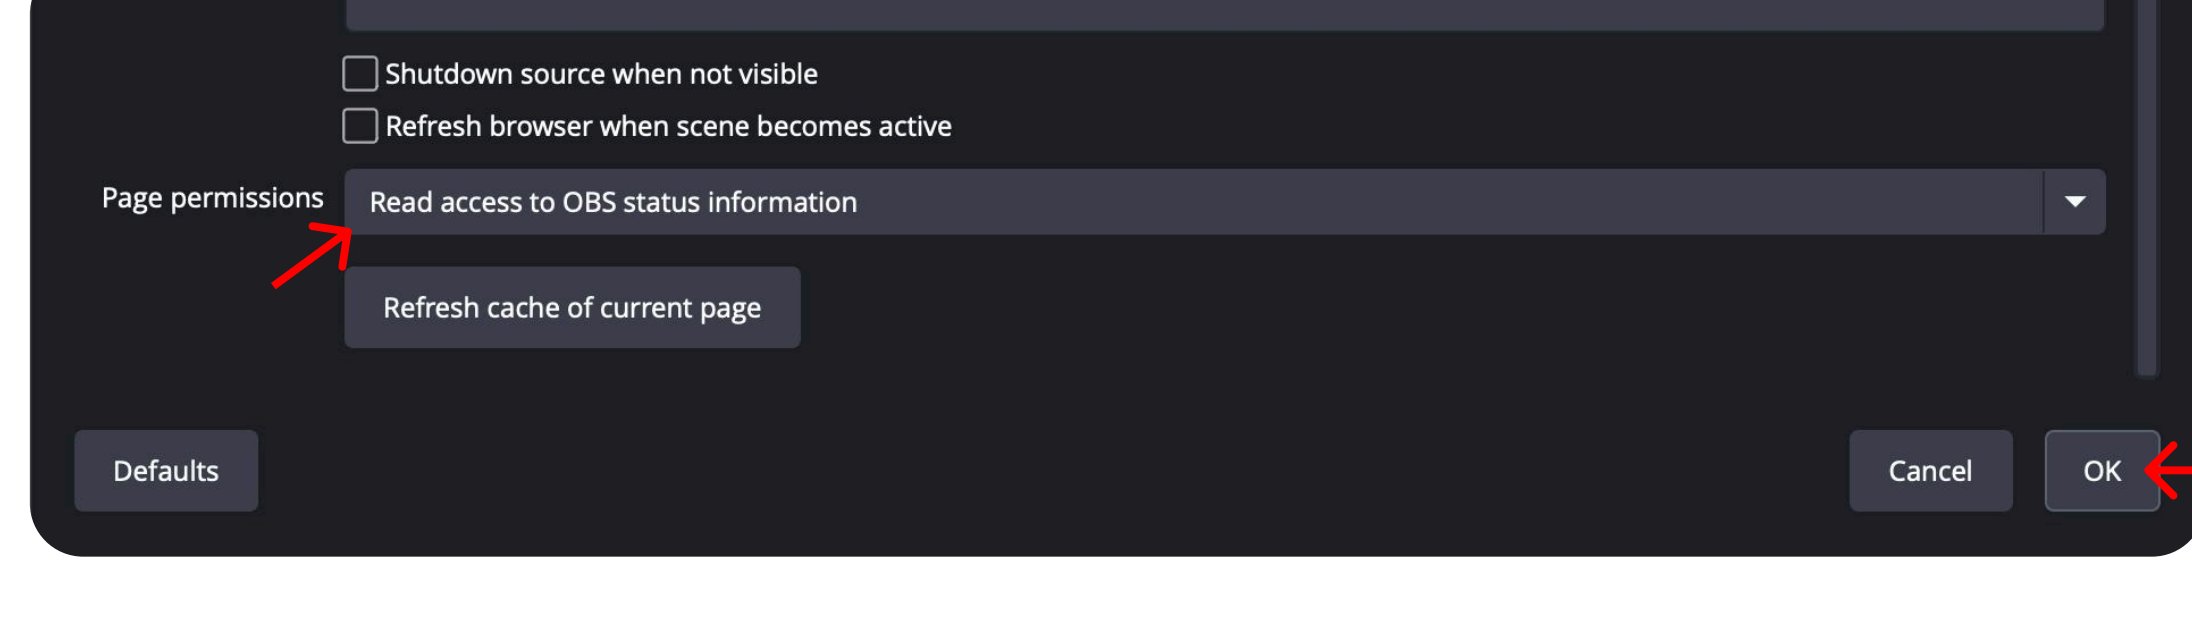

3/ Paste the link created on StreamElements into the URL field. Change the width and height to the following values:

Width: 400 Height: 400

At the bottom of this page, make sure you have selected the option "Read access to OBS status information".

Then click OK. You should see your widget displayed <3 <3

Step 3:

Disabled browser source hardware acceleration

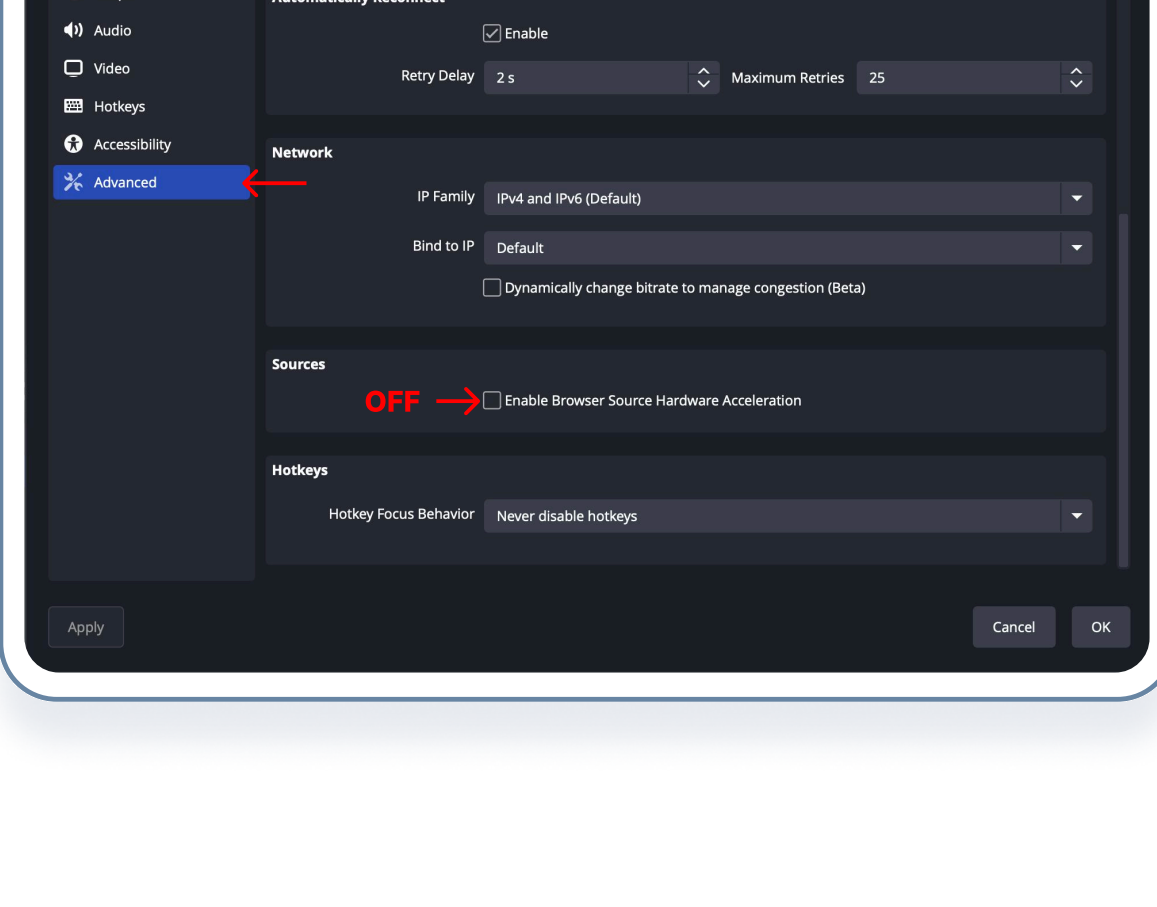

1/ Open the **preferences** page on Streamlabs or OBS.

On OBS:

Select Advanced Settings and scroll all the way down the page.

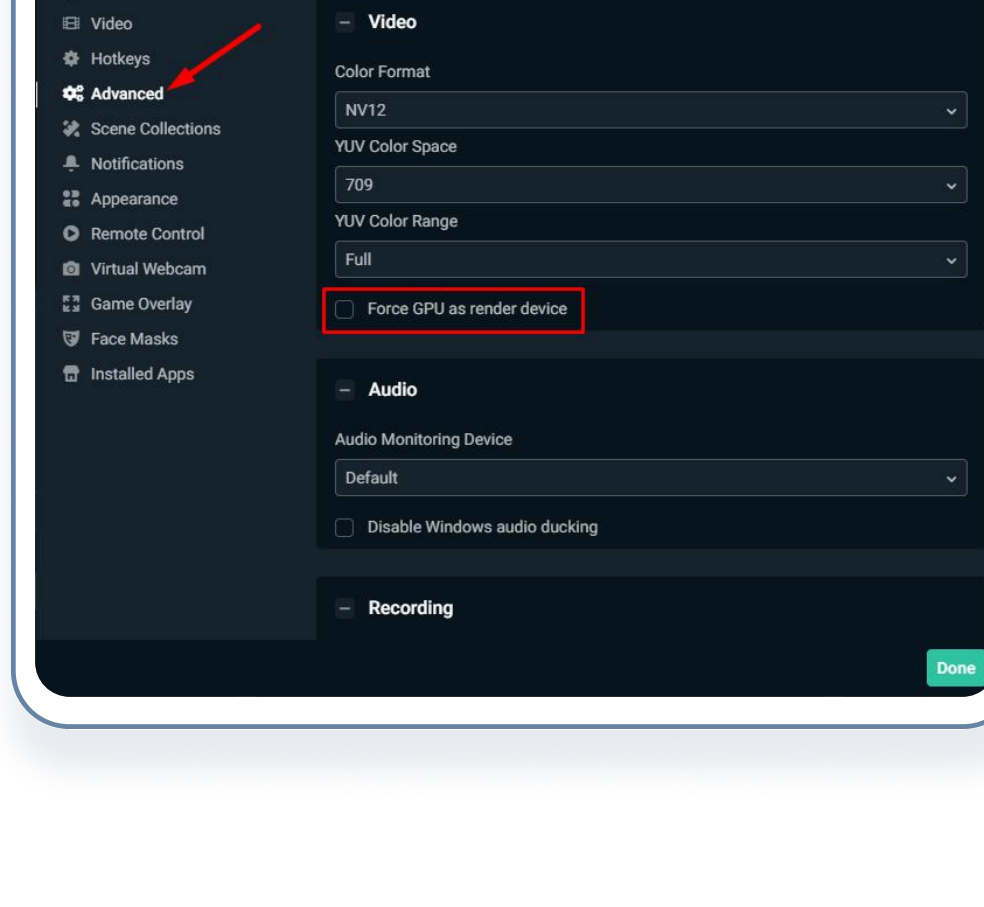

Make sure the option "Enable browser source hardware acceleration" **is disabled**.

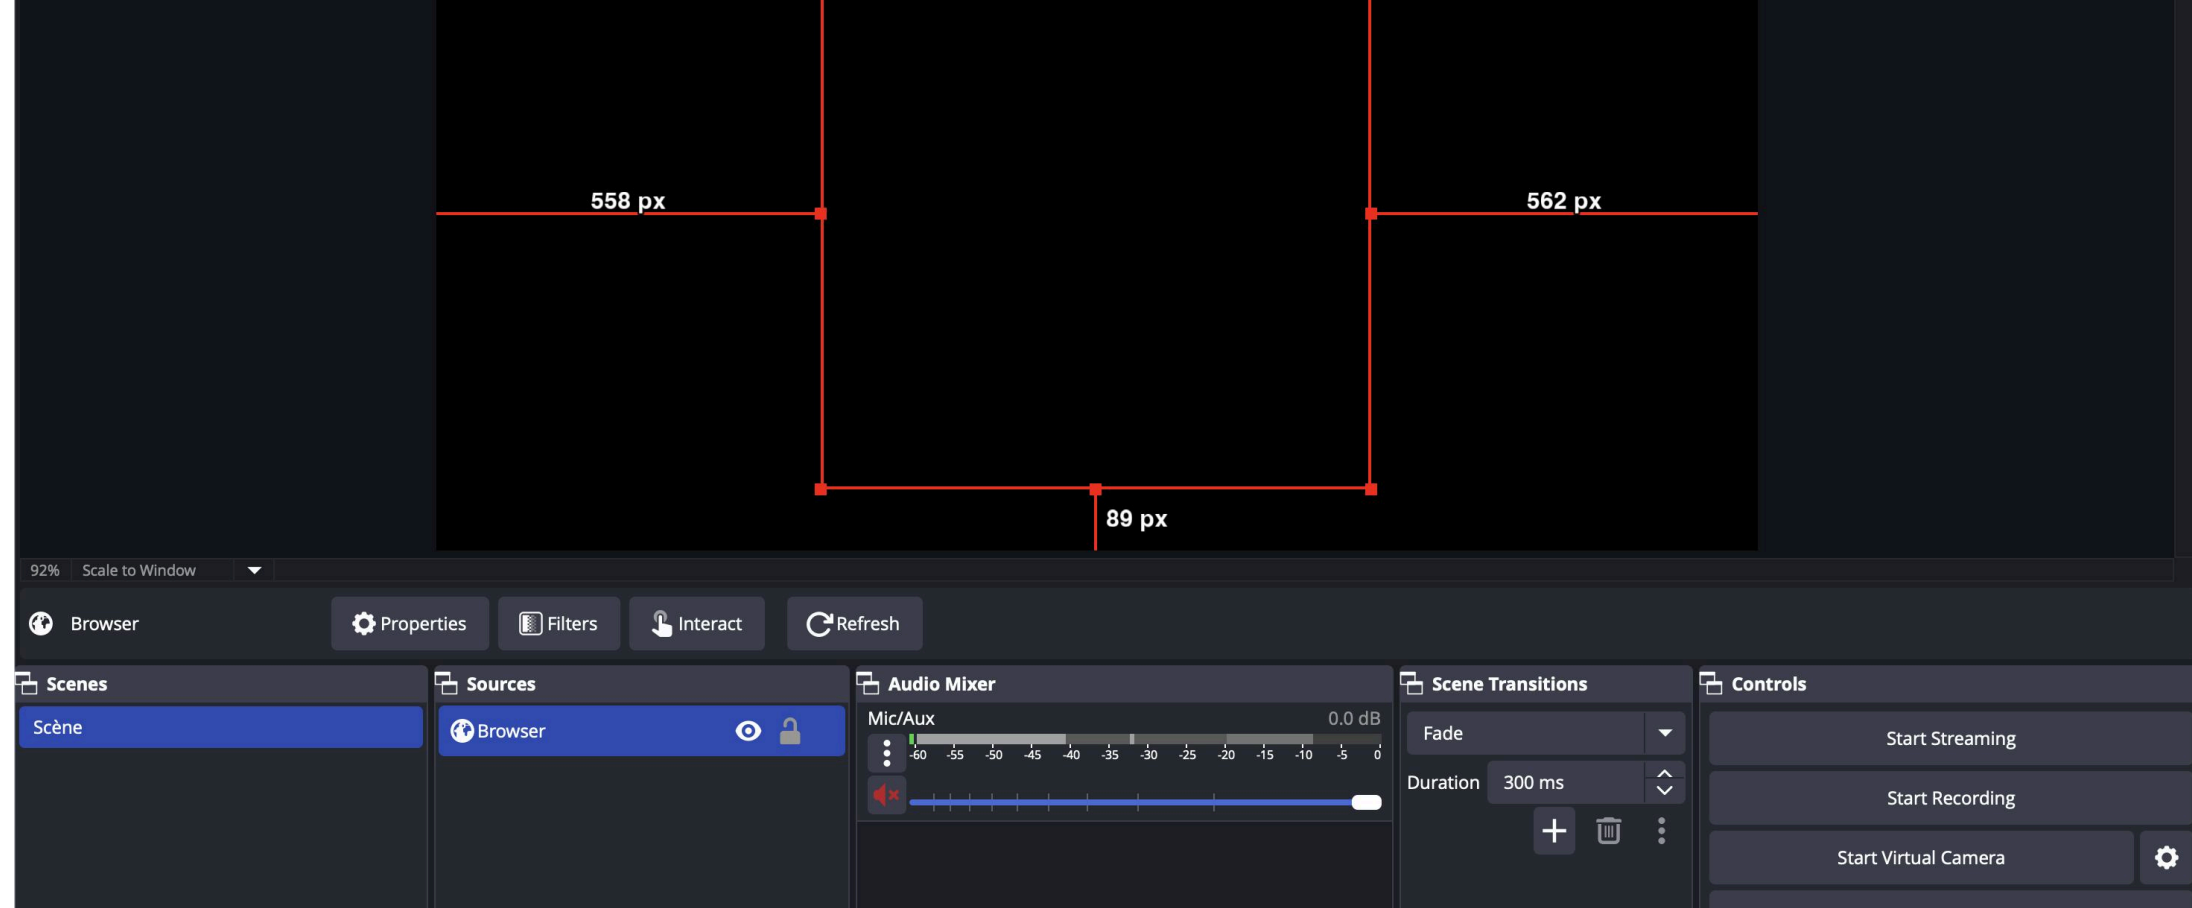

On Streamlabs

Select Advanced Settings and scroll all the way down the page.

Make sure the option "Force GPU as render device" **is disabled**.

2/ All you have to do now is restart OBS/STREAMLABS for the settings to take effect 😊

Great job! You've reached the end of the setup guide. Your widget should now be up and running—time to test it out!
