

This widget is added to a Twitch stream by setting it up in StreamElements, then linking that web source in your streaming software (like OBS or StreamLabs).

Please read the guide thoroughly. [There's a video tutorial available as well.](#) If you still have question afterwards, message me on Etsy.

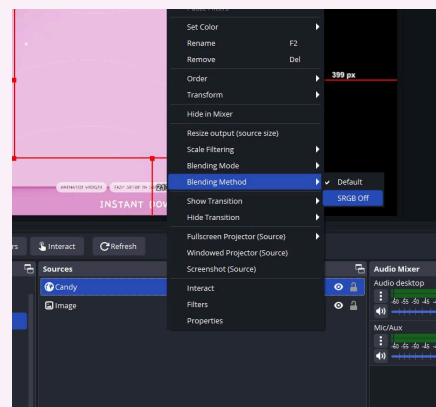

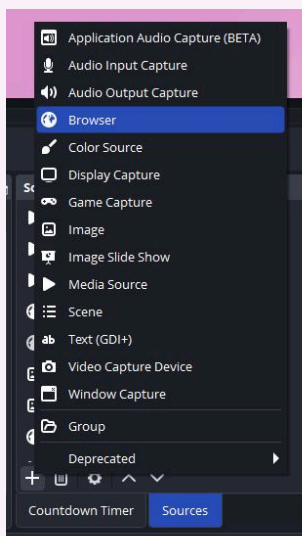

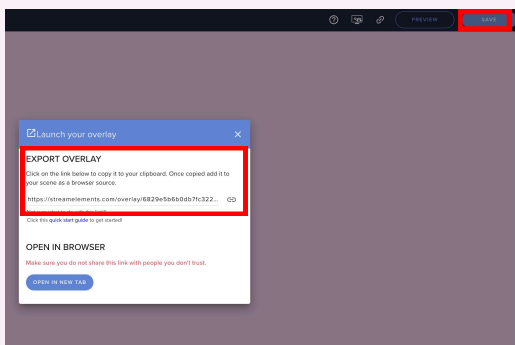

This widget requires a stable internet connection to play correctly.

Go to this link while connected to StreamElements: <https://overlays.batary.dev/share/cmd4xlyk60001ky06zueb1nac> and follow the instructions (do not distribute this link. I can see which users have access to it). This will copy the widget to your StreamElements dashboard.

Open the overlay in StreamElements (click the 'edit' button), copy the URL of the widget and paste it into a Browser source in OBS studio or your streaming software. **Make sure your browser source layer is 1920×1080px.**

Then, test the widget by typing "I order latte" in your chat. Et voilà, you can now resize the OBS layer and place it where you want.

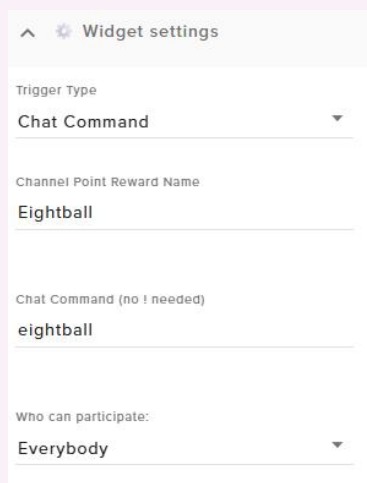

! If you want the widget to show up in multiple scene, don't create a new browser source but re-use the existing one to avoid duplicating sound !

You can personalize the widget by opening the Overlay in Streamelements then click 'Settings'.

You can decide between:

- Channel point redemption
 - If you decide for channel points, you have to create a redemption in your Twitch dashboard then type its exact name in the Streamelements field below. An icon is included in this pack.
- Chat command and customize the command
 - You'll need to write your command (!order f.ex, don't forget the "!" in the field below). You'll need to add a textbox so users can write their orders!
- Bits (activate every time someone sends you bits)
- Tips (activate every time someone sends you tips)
- Subs (activate every time someone subs)

You can combine how many you want. To activate or de-activate a redeem method, uncheck the box. Whenever you make a change in Streamelements, you need to SAVE to apply it. By default, they're all activated.

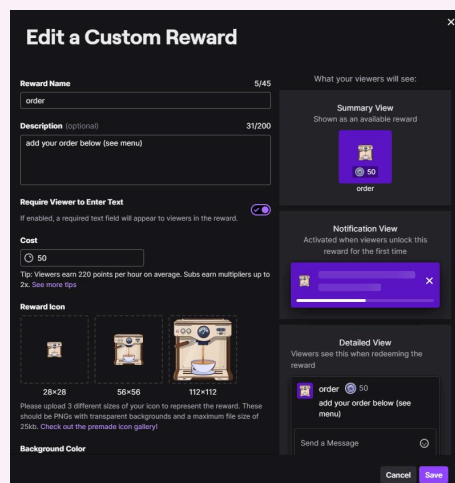

Widget settings

Trigger Type
Chat Command

Channel Point Reward Name
Eightball

Chat Command (no ! needed)
eightball

Who can participate:
Everybody

Edit a Custom Reward

Reward Name
order

Description (optional)
add your order below (see menu)

Require Viewer to Enter Text
If enabled, a required text field will appear to viewers in the reward.

Cost
50

Reward Icon
28x28 56x56 112x112

What your viewers will see:

Summary View
Shown as an available reward

Notification View
Activated when viewers unlock this reward for the first time

Detailed View
Viewers see this when redeeming the reward

Send a Message

Cancel Save

The widget can either always be visible or only be shown when it's redeemed. You can choose to show the menu or not (automatically created using your menu items).

You can edit the cooldown, it's minimum 6s to leave enough time for the animation to finish completely before starting again.

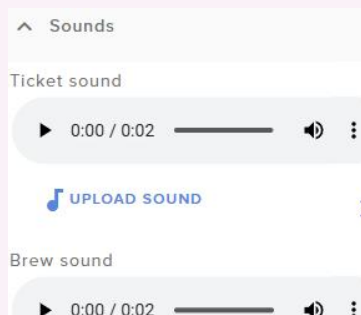

Widget settings

☐ Widget always visible

☐ Show menu

Cooldown (seconds)

Default sounds come with this pack and can be uploaded here (it should be loaded by default). You can choose the sound, 0 will mute. You can upload your own sound that'll play on animation. If you don't want a sound for one of the 3 slots, just leave it empty (click the x button to remove it)

You can name and choose the colors of the beverage. The menu will update automatically. You can have up to 5 items. If you want less, just leave a text box empty and it'll remove it. Users will use that name to redeem items (f.ex: !order Latte)

Important note: When a user doesn't redeem a specific item (f.ex writing !cafe instead of !cafe matcha) OR when the code cannot identify an item (f.ex !cafe marcha instead of matcha), a random item will be picked for that user. Else, the name of the item should be:

- For commands, after the command (!command itemName)
- For channel points redemption, you'll have to add an input field when you create on Twitch so users can type their order
- For bits, the order will be whatever's type as a message with their gift.
- For subs and donations, they cannot choose

The price of the item cannot be customized. It'll be:

- The number of bits a user donated (X bits)
- Or the price of the channel point redeem (X pts)
- Or 1\$ default if you are using chat command
- Or 1 sub for subs
- Or the number of tips for tips with a \$ at the end.

I've included in this pack a few variants of all the assets if you want to switch the colors. Just upload one of those images instead. If you want to upload, you can but you'll have to respect the exact dimensions of the original images or the animation tricks won't work!

You can customize the text at the top of the menu and the bottom of the receipt using these fields:
