

Setup Guide

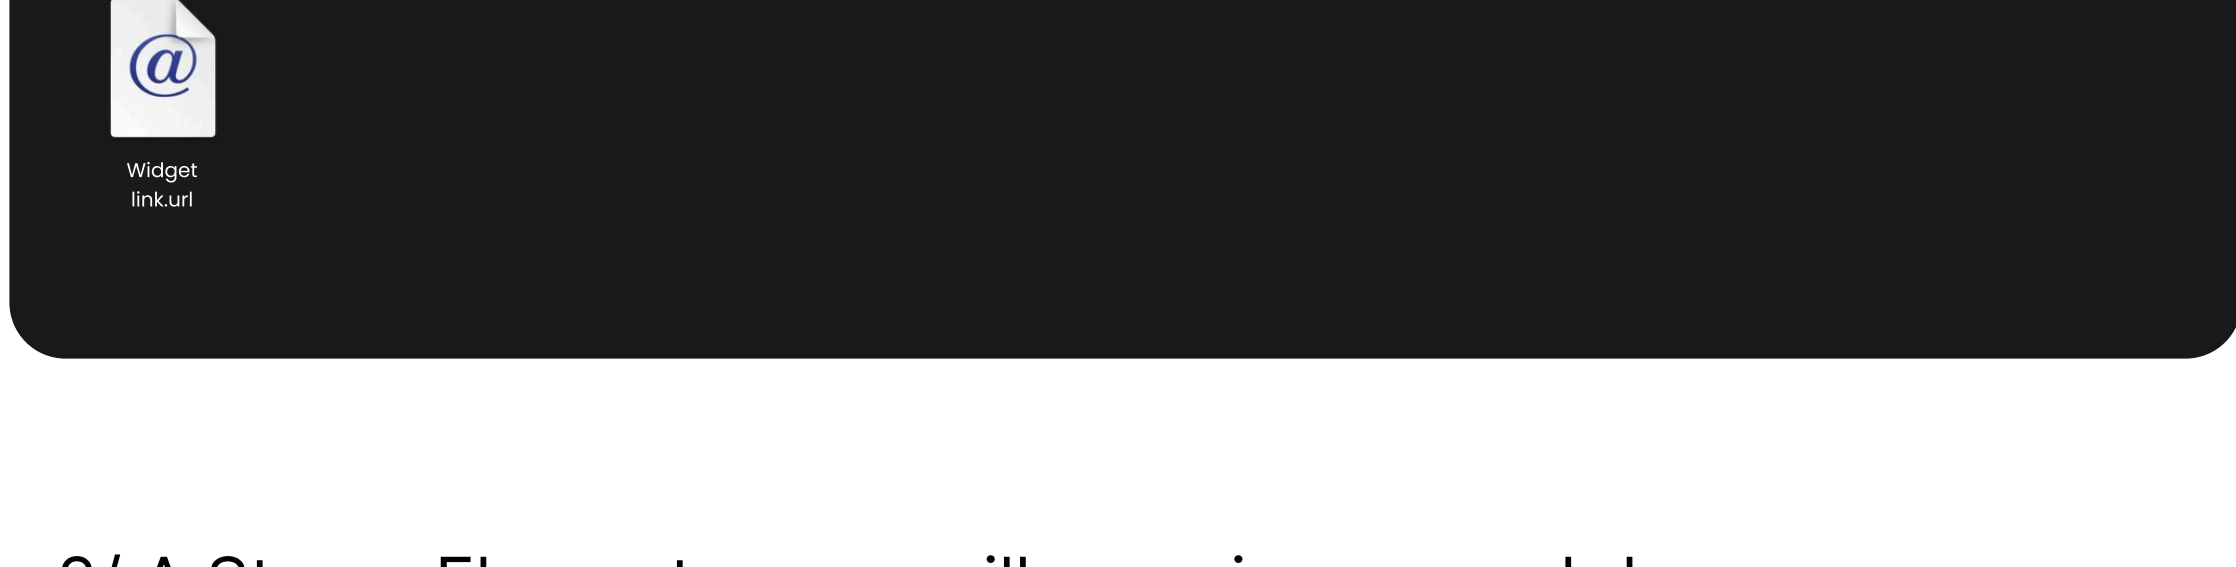

Stream Widget

Step 1:

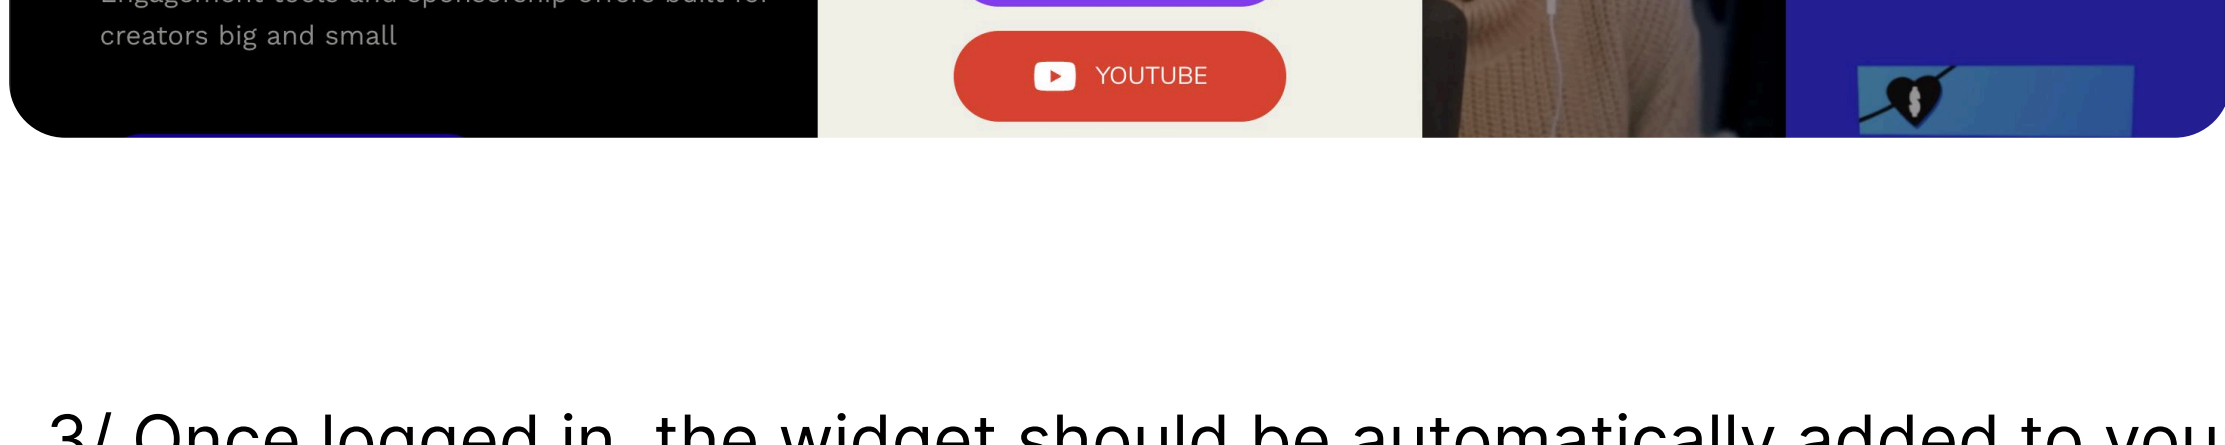

Import the files into StreamElements.

1/ From your computer, double-click on the file "Widget link".url

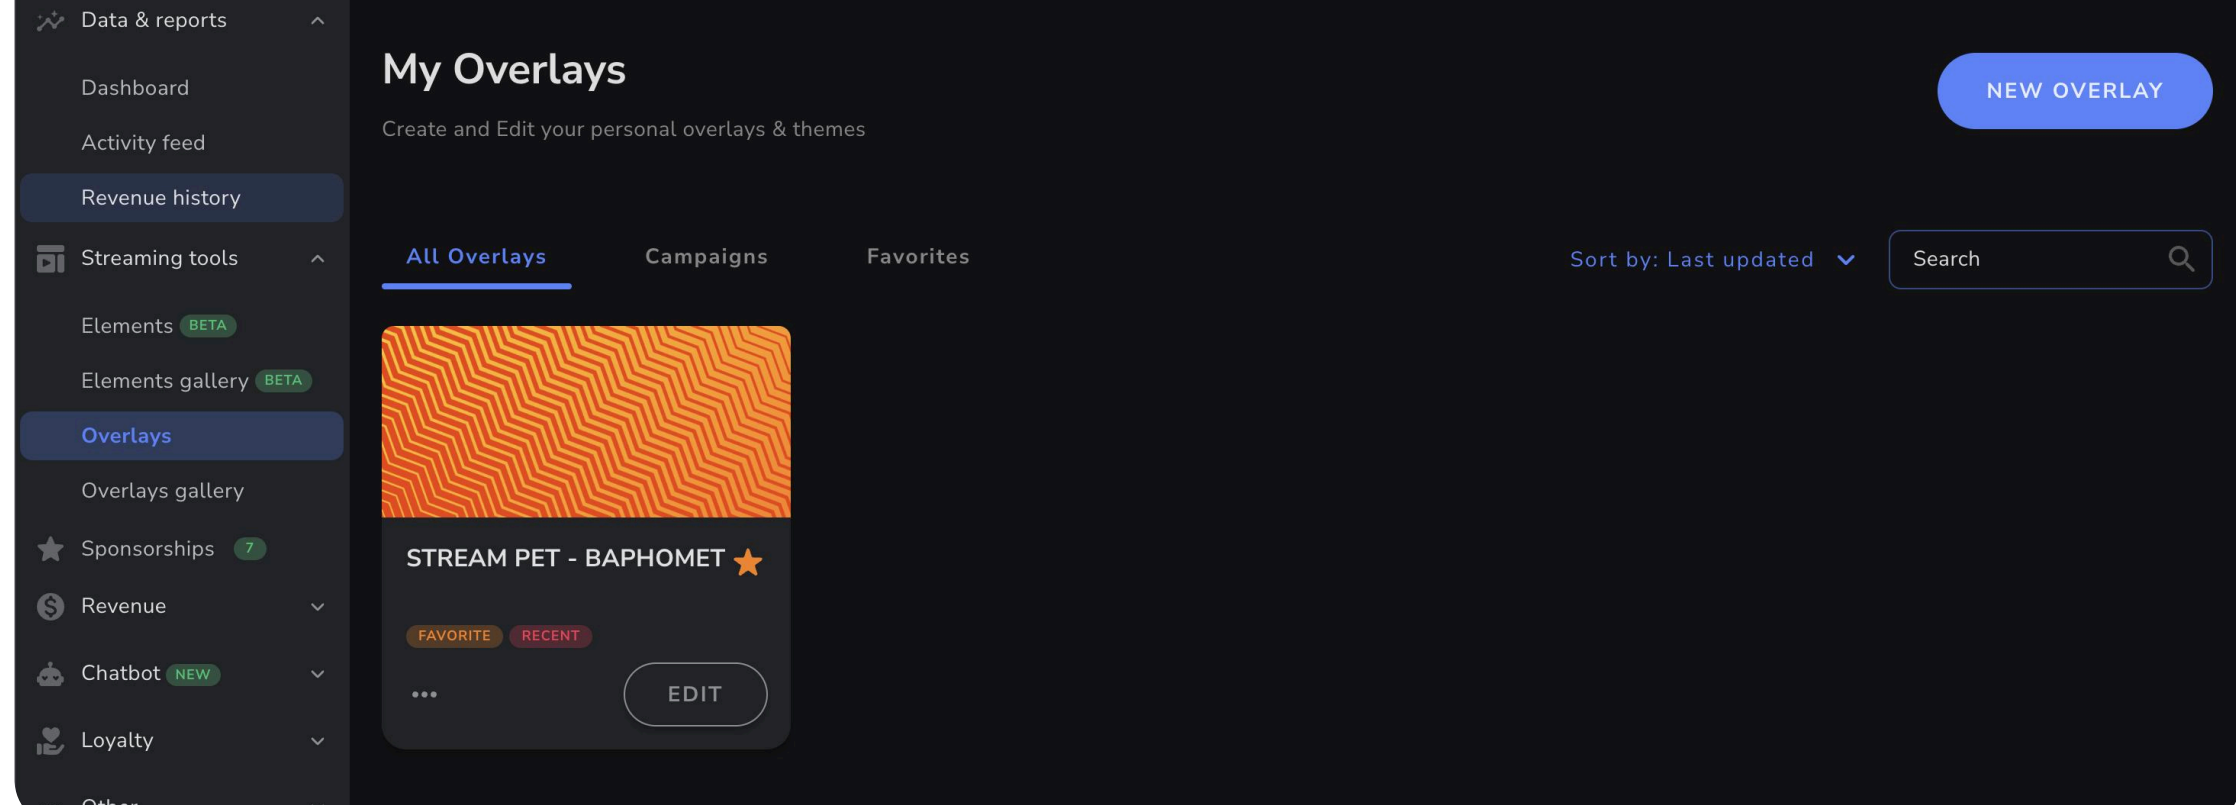

2/ A StreamElements page will open in your web browser.

Log in with your **Twitch account**.

3/ Once logged in, the widget should be automatically added to your overlays.

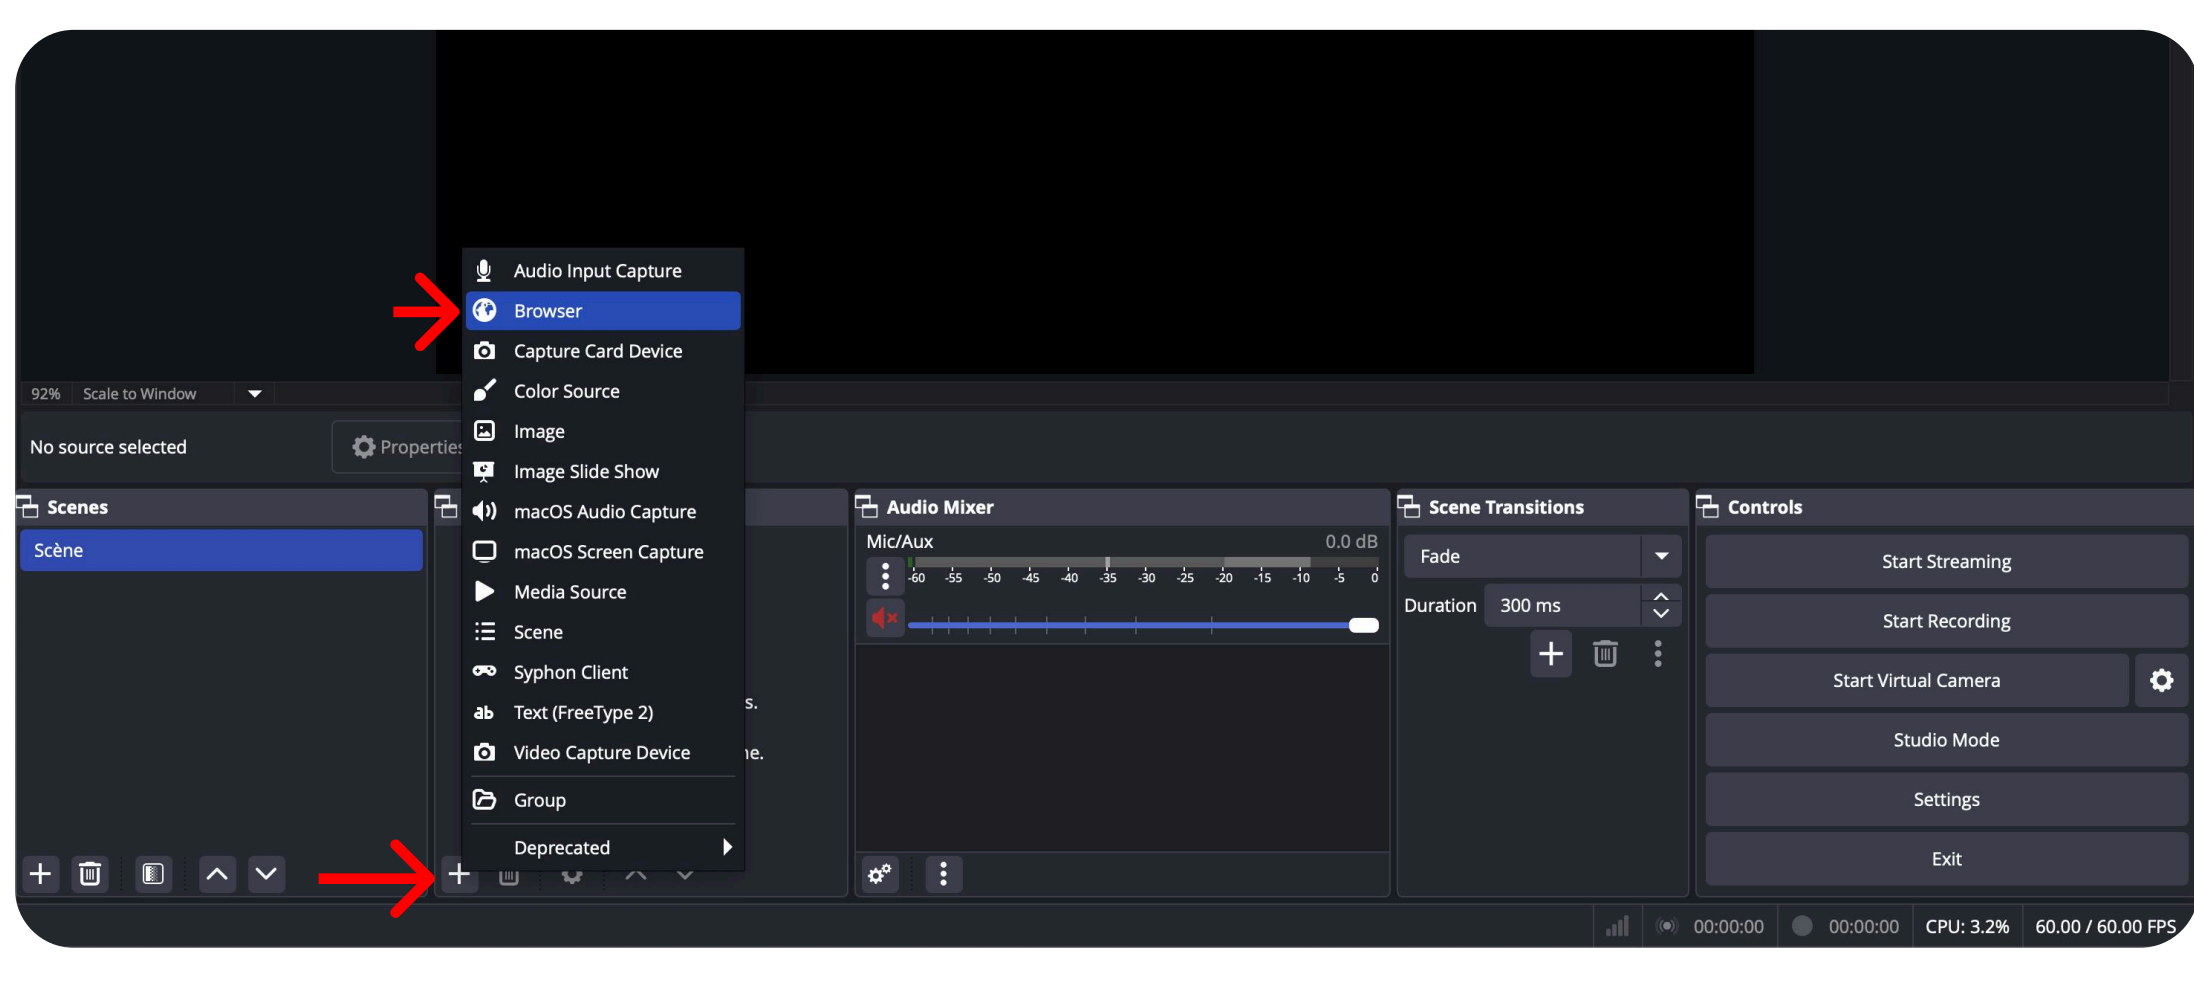

4/ Now click on the "..." and copy the URL

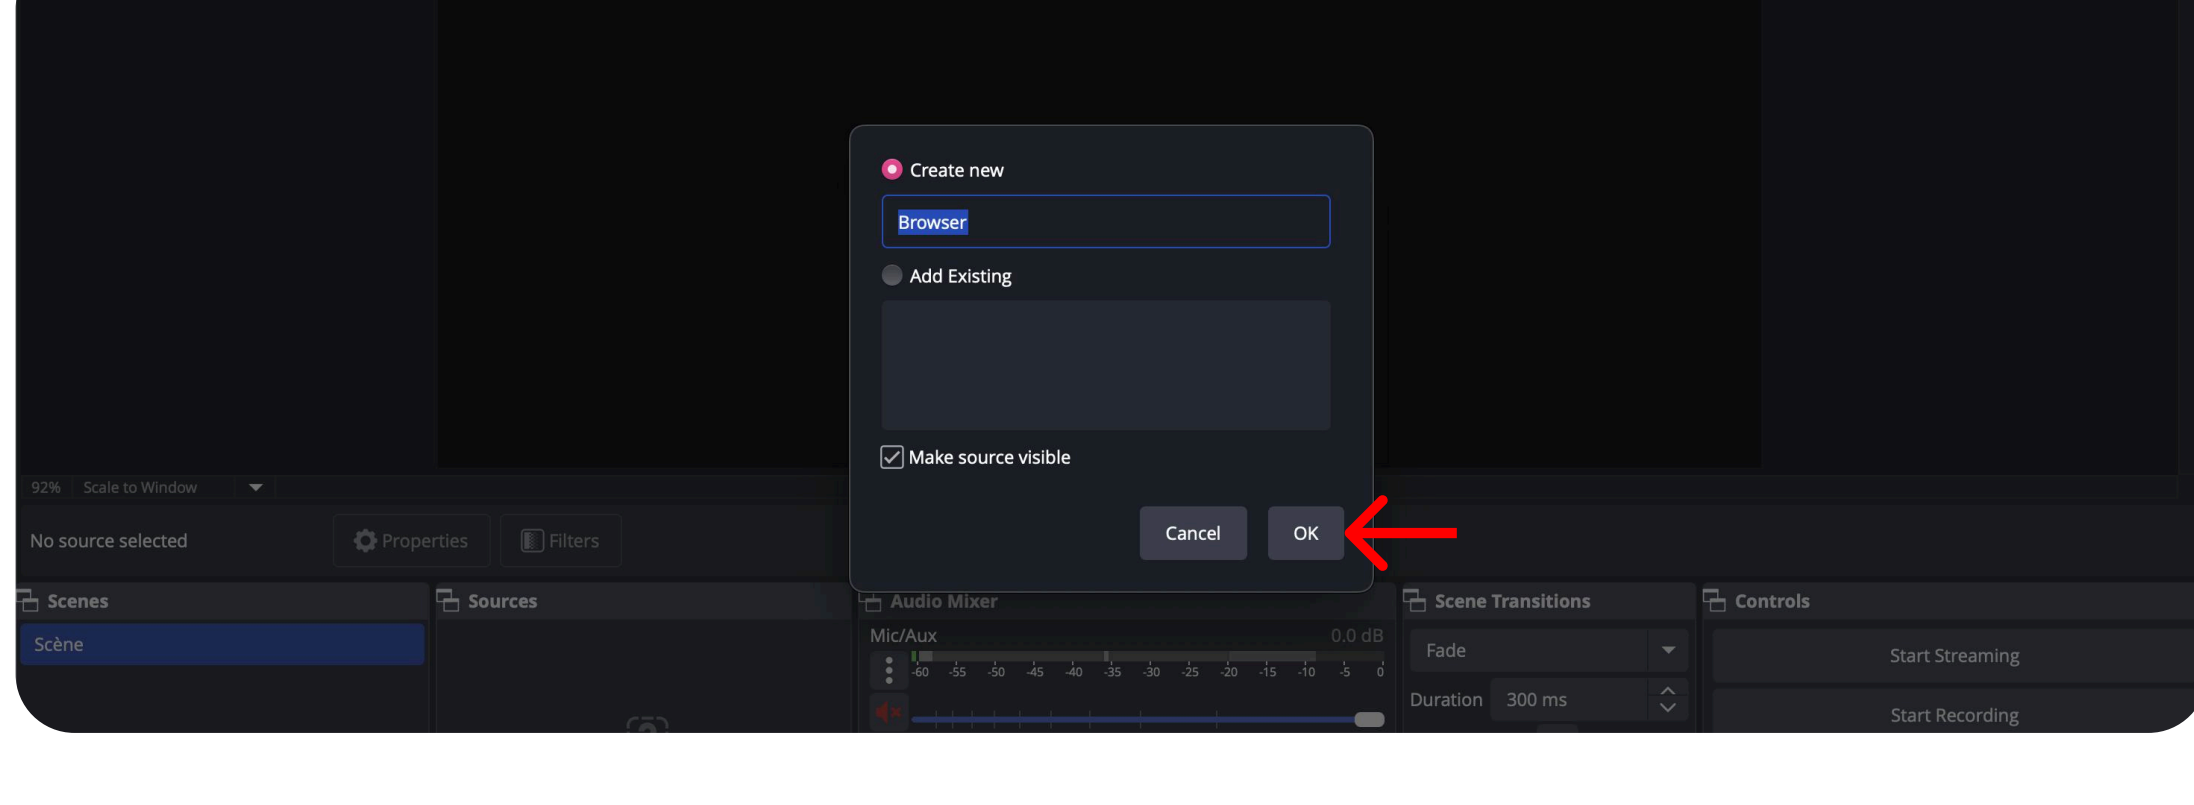

Step 2:

Import the link into OBS or Streamlabs

1/ Open OBS or Streamlabs on your computer and add a new source: "Browser".

2/ Give your source a name and click "Ok."

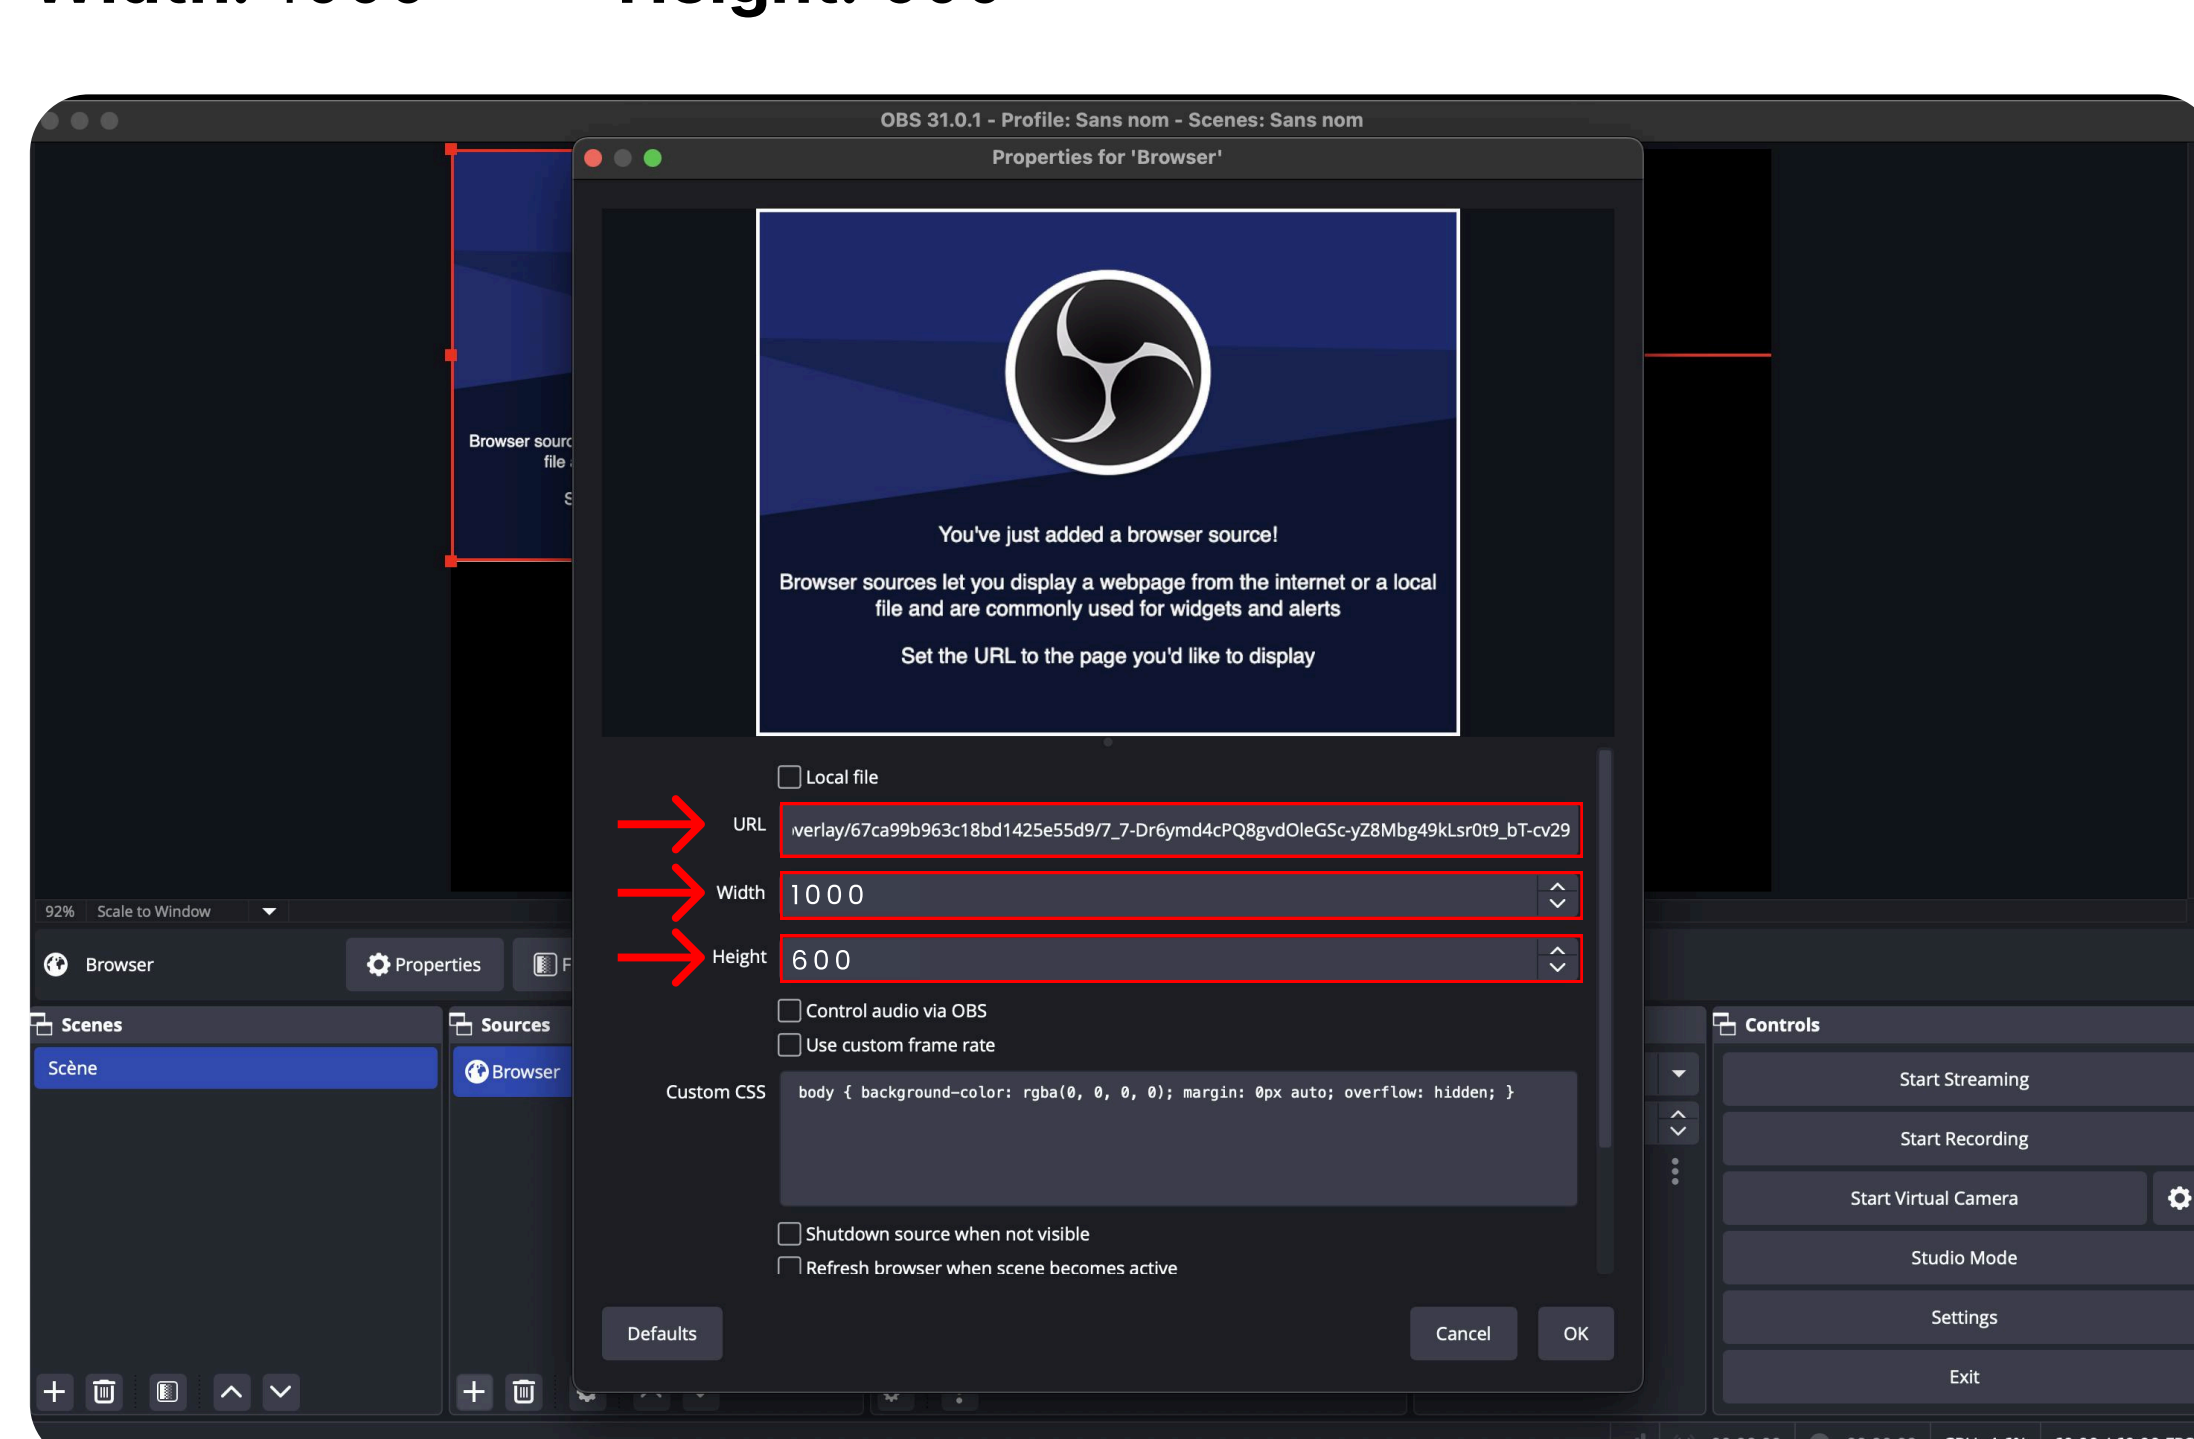

3/ Paste the link created on StreamElements into the URL field.

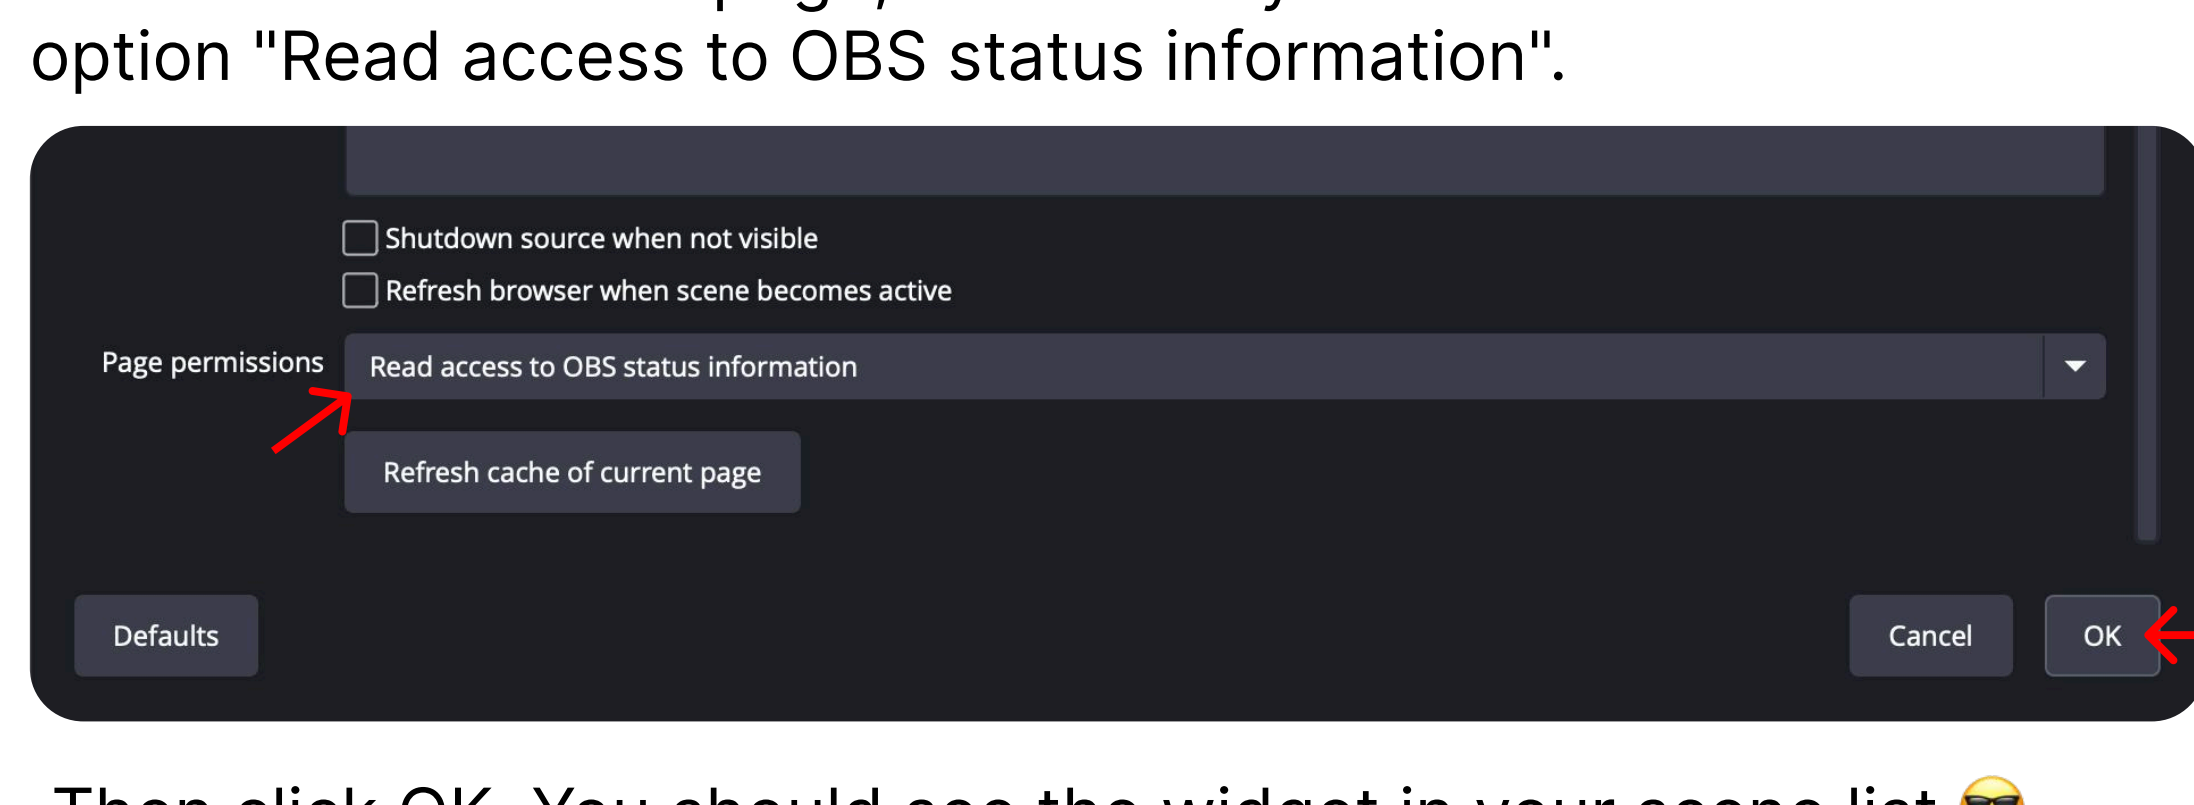

Change the width and height to the following values:

Width: 1000

Height: 600

At the bottom of this page, make sure you have selected the option "Read access to OBS status information".

Then click OK. You should see the widget in your scene list 😊

There's only one step left.

Step 3:

Disabled browser source hardware acceleration

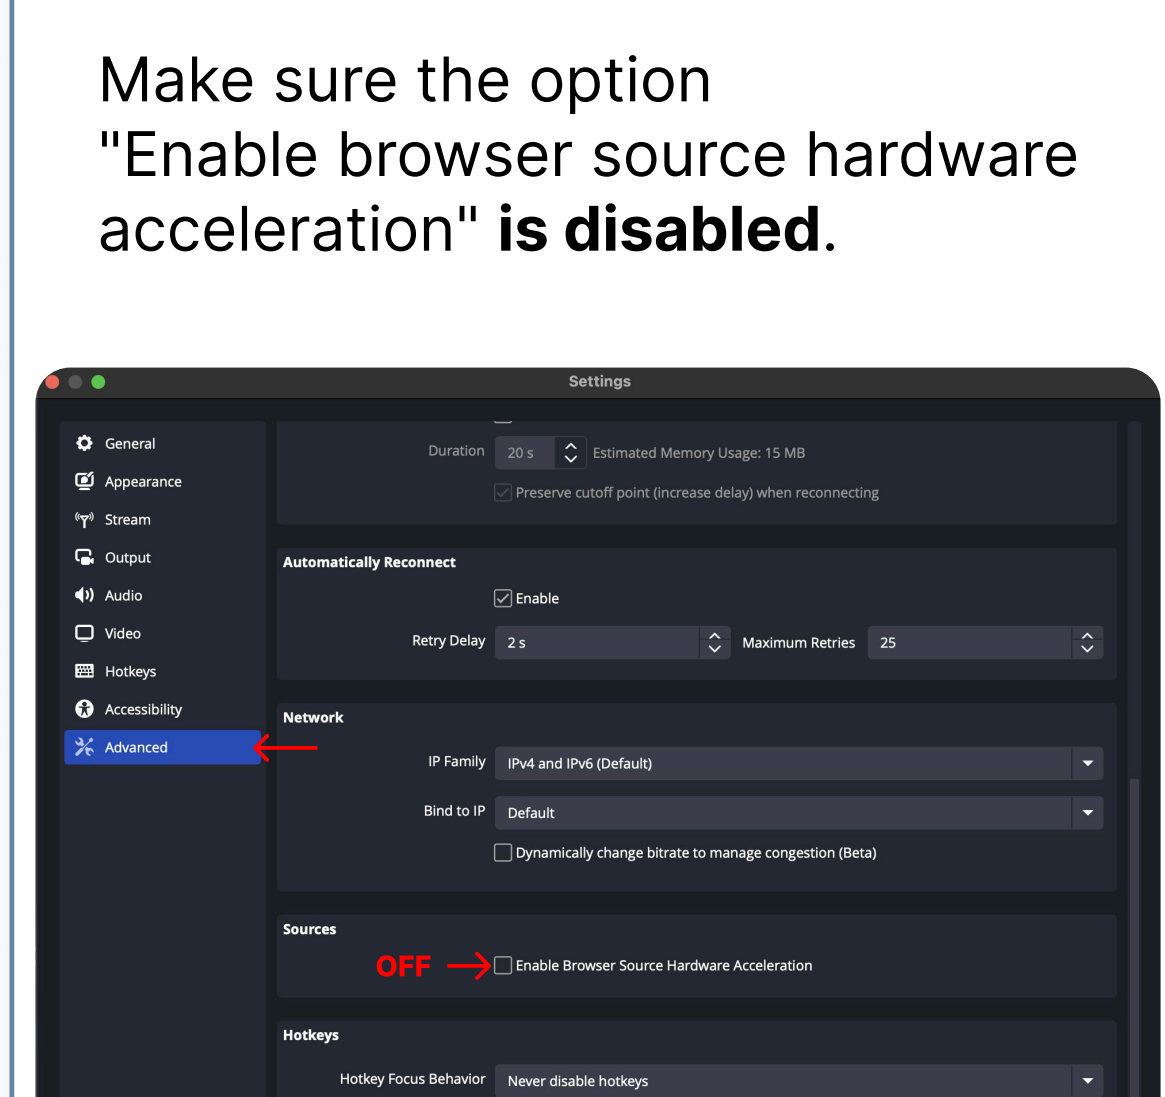

1/ Open the **preferences** page on Streamlabs or OBS.

On OBS:

Select Advanced Settings and scroll all the way down the page.

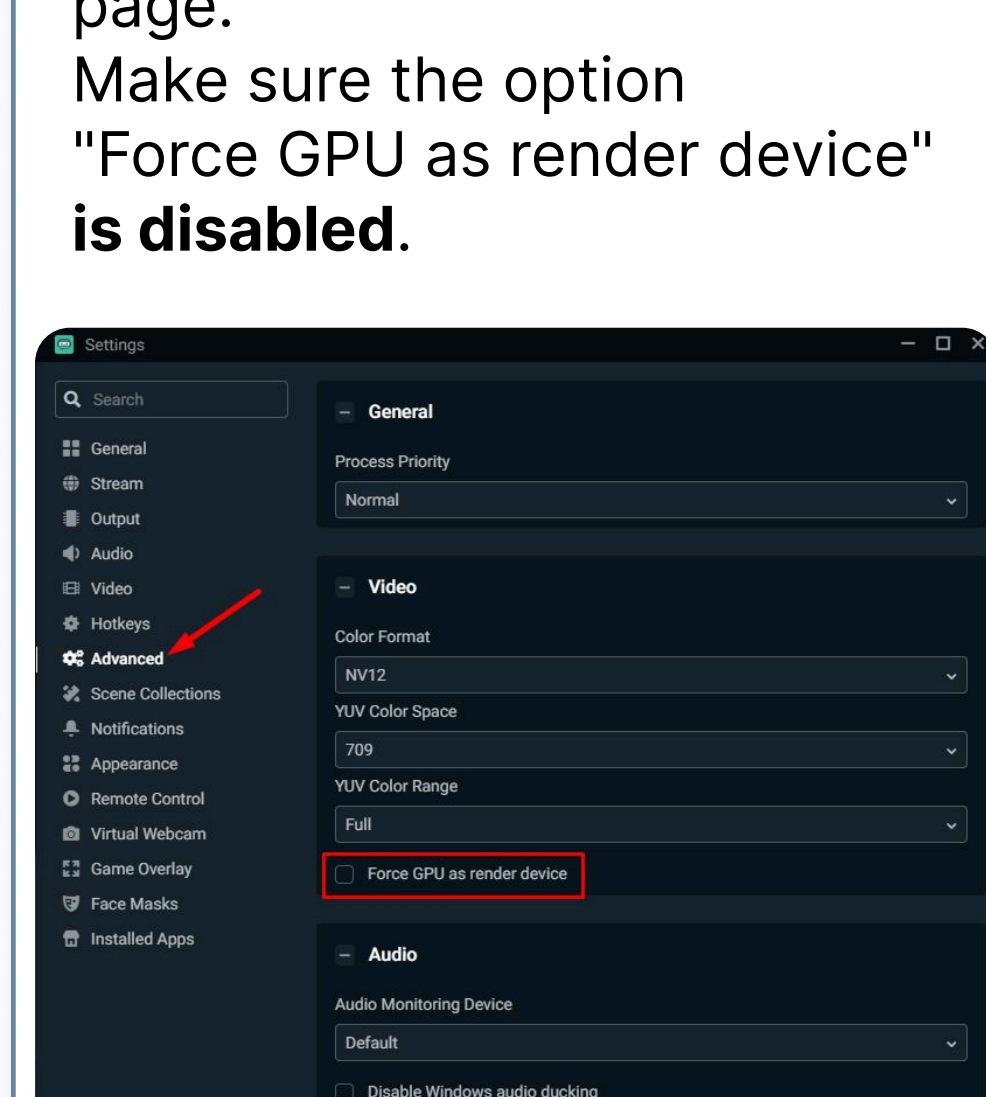

Make sure the option "Enable browser source hardware acceleration" **is disabled**.

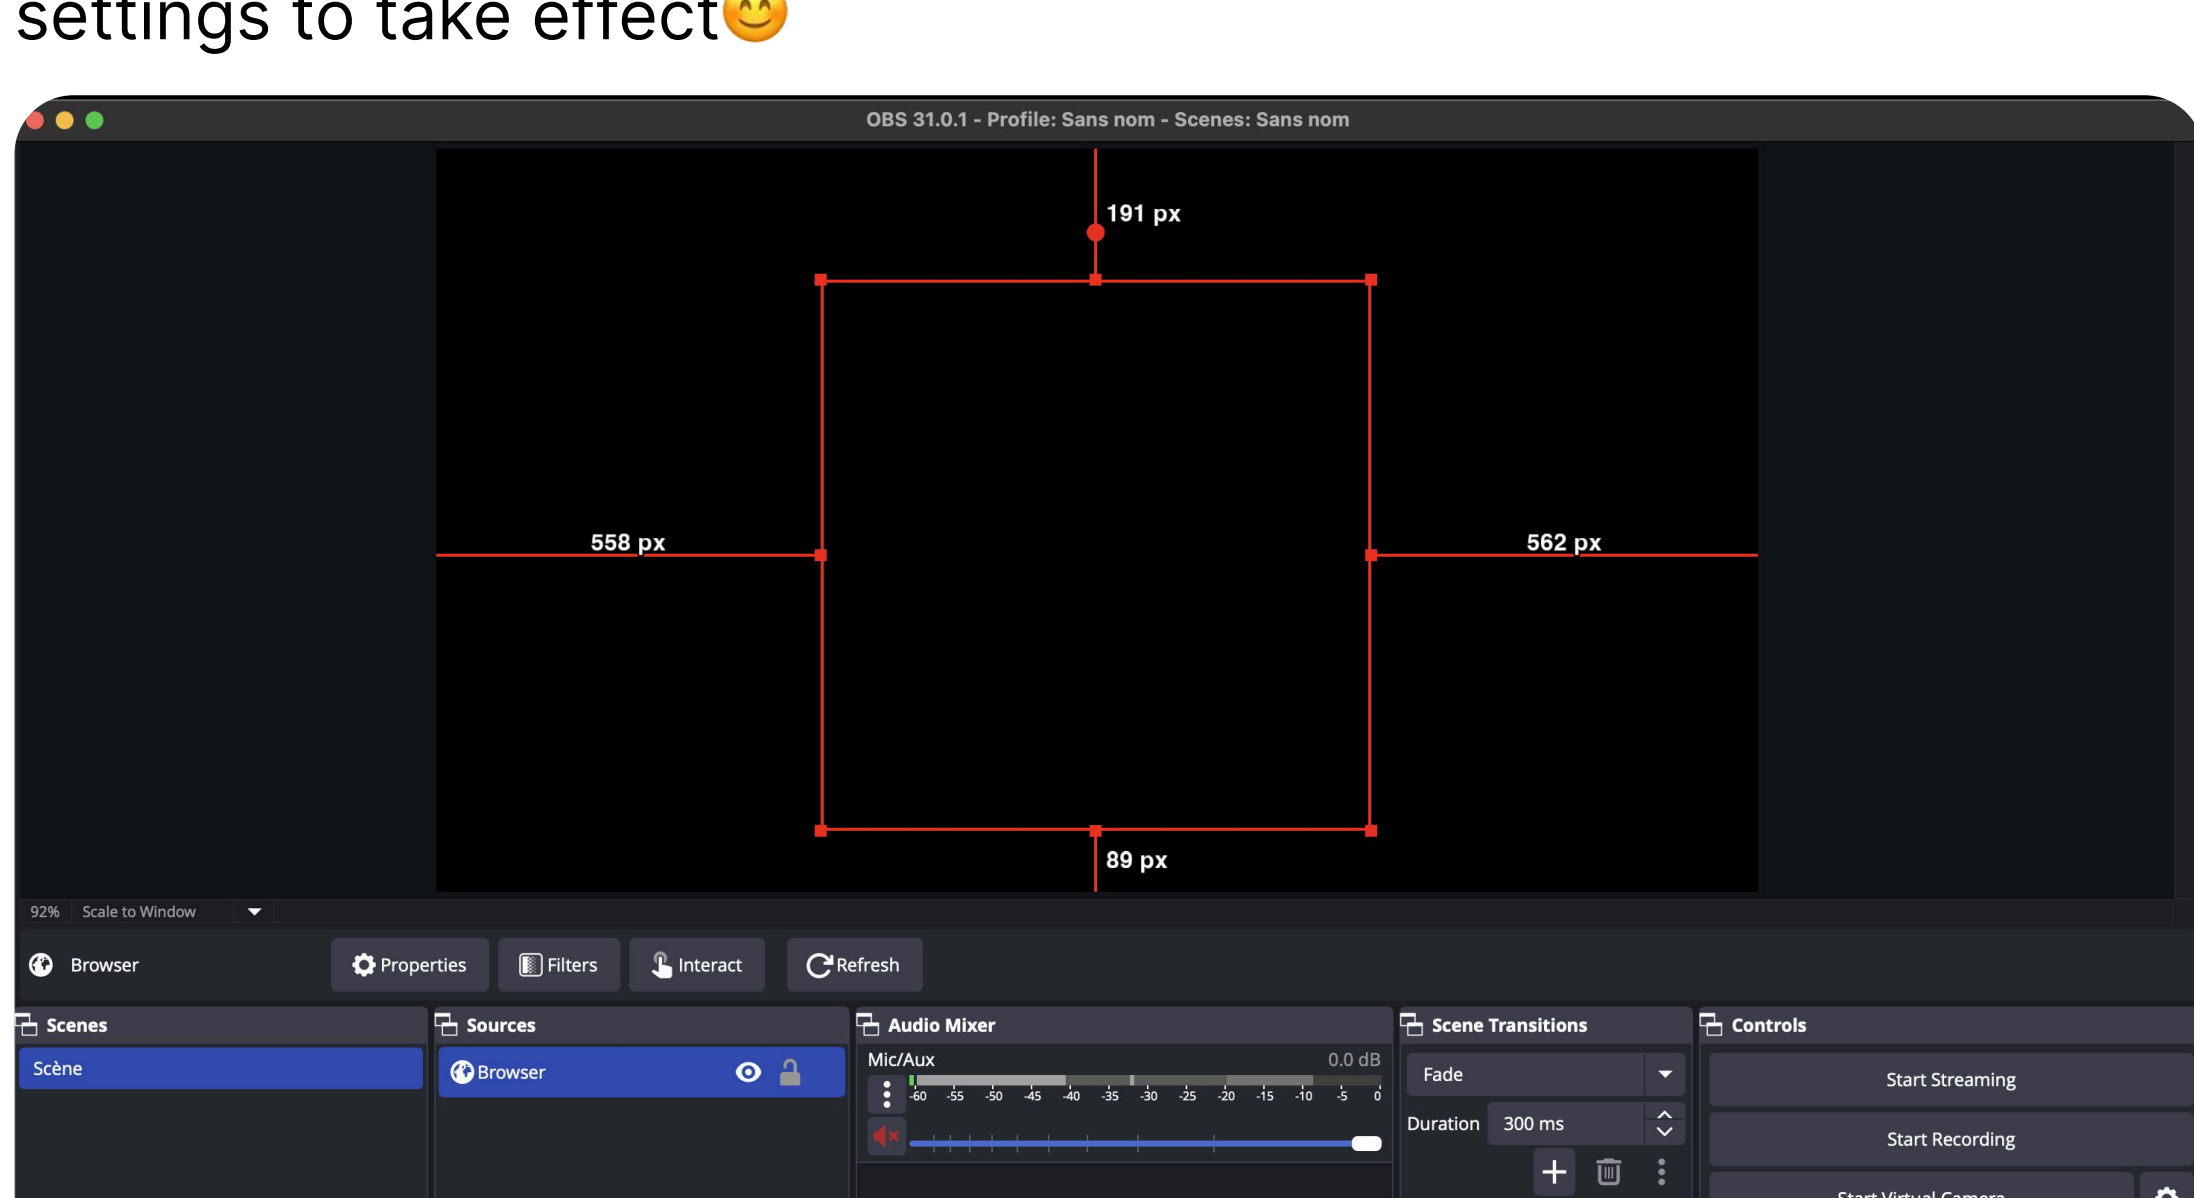

On Streamlabs

Select Advanced Settings and scroll all the way down the page.

Make sure the option "Force GPU as render device" **is disabled**.

2/ All you have to do now is restart OBS/STREAMLABS for the settings to take effect 😊

The widget setup is complete! Test it by typing the command:

!readmails in your Twitch chat, you should see a red pixel appear.

👉 Go to guide 2 to learn how to **use your widget**.
