

Games Rules

pixel war widget

Each of your viewers will have access to a personal email inbox. They'll be able to send and read emails using chat commands.

To send an email, type the command: **!send** followed by the **person's name** and then **your message**, as shown in the example below:

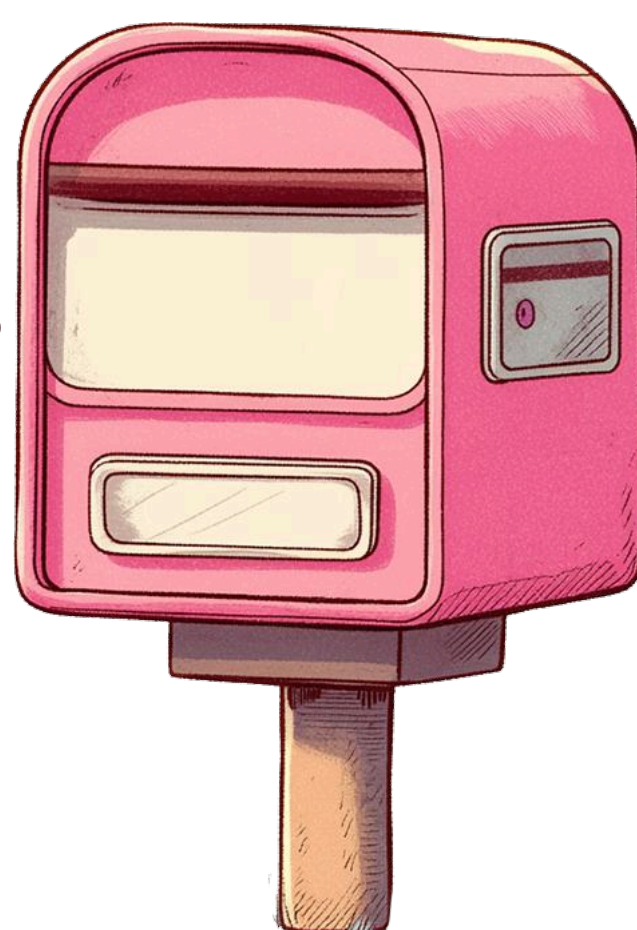

!send	username	content
!send	lola883	Hey Lola!

 **max:** !send lola883 Hey Lola!

Your mailbox can store up to 3 messages. You can change this limit in the StreamElements settings (see Guide 3: Advanced Settings).

To read your messages, simply type the command **!readmails**.

1/2 From Max56:
Bro I update your
base! Check server

Messages will appear one by one until all of them have been read.

Messages are stored permanently — you can close OBS and they'll remain active.

You can customize the color of the mailbox, the style of the text bubble, and many other elements directly from the StreamElements overlay settings.

Use **Guide 3 – Advanced Settings** to learn how to do it.
